HUTCHISON CHINA MEDITECH

Corporate Presentation

July 30, 2020

Nasdaq/AIM: HCM

Safe harbor statement & disclaimer

The performance and results of operations of the Chi-Med Group contained within this presentation are historical in nature, and past performance is no guarantee of future results.

This presentation contains forward-looking statements within the meaning of the "safe harbor" provisions of the U.S. Private Securities Litigation Reform Act of 1995. These forward-looking statements can be identified by words like "will," "expects," "anticipates," "future," "intends," "plans," "believes," "estimates," "pipeline," "could," "potential," "first-in-class," "best-in-class," "designed to," "objective," "guidance," "pursue," or similar terms, or by express or implied discussions regarding potential drug candidates, potential indications for drug candidates or by discussions of strategy, plans, expectations or intentions. You should not place undue reliance on these statements. Such forward-looking statements are based on the current beliefs and expectations of management regarding future events, and are subject to significant known and unknown risks and uncertainties. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those set forth in the forward-looking statements. There can be no guarantee that any of our drug candidates will be approved for sale in any market, or that any approvals which are obtained will be obtained at any particular time, or that any such drug candidates will achieve any particular revenue or net income levels. In particular, management's expectations could be affected by, among other things: unexpected regulatory actions or delays or government regulation generally; the uncertainties inherent in research and development, including the inability to meet our key study assumptions regarding enrollment rates, timing and availability of subjects meeting a study's inclusion and exclusion criteria and funding requirements, changes to clinical protocols, unexpected adverse events or safety, quality or manufacturing issues; the inability of a drug candidate to meet the primary or secondary endpoint of a study; the impact of the COVID-19 pandemic or other health crises in China or globally; the inability of a drug candidate to obtain regulatory approval in different jurisdictions or gain commercial acceptance after obtaining regulatory approval; global trends toward health care cost containment, including ongoing pricing pressures; uncertainties regarding actual or potential legal proceedings, including, among others, actual or potential product liability litigation, litigation and investigations regarding sales and marketing practices, intellectual property disputes, and government investigations generally; and general economic and industry conditions, including uncertainties regarding the effects of the persistently weak economic and financial environment in many countries and uncertainties regarding future global exchange rates. For further discussion of these and other risks, see Chi-Med's filings with the U.S. Securities and Exchange Commission and on AIM. Chi-Med is providing the information in this presentation as of this date and does not undertake any obligation to update any forward-looking statements as a result of new information, future events or otherwise.

In addition, this presentation contains statistical data, third-party clinical data and estimates that Chi-Med obtained from industry publications and reports generated by third-party market research firms, including Frost & Sullivan, QuintilesIMS/IQVIA, independent market research firms, clinical data of competitors, and other publicly available data. All patient population, market size and market share estimates are based on Frost & Sullivan or QuintilesIMS/IQVIA research, unless otherwise noted. Although Chi-Med believes that the publications, reports, surveys and third-party clinical data are reliable, Chi-Med has not independently verified the data and cannot guarantee the accuracy or completeness of such data. You are cautioned not to give undue weight to this data. Such data involves risks and uncertainties and are subject to change based on various factors, including those discussed above.

Nothing in this presentation or in any accompanying management discussion of this presentation constitutes, nor is it intended to constitute or form any part of: (i) an invitation or inducement to engage in any investment activity, whether in the United States, the United Kingdom or in any other jurisdiction; (ii) any recommendation or advice in respect of any securities of Chi-Med; or (iii) any offer for the sale, purchase or subscription of any securities of Chi-Med.

No representation or warranty, express or implied, is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or correctness of the information, or opinions contained herein. Neither Chi-Med, nor any of Chi-Med's advisors or representatives shall have any responsibility or liability whatsoever (for negligence or otherwise) for any loss howsoever arising from any use of this presentation or its contents or otherwise arising in connection with this presentation. The information set out herein may be subject to updating, completion, revision, verification and amendment and such information may change materially.

All references to "Chi-Med" as used throughout this presentation refer to Hutchison China MediTech Limited and its consolidated subsidiaries and joint ventures unless otherwise stated or indicated by context. This presentation should be read in conjunction with Chi-Med's results for the six months ended June 30, 2020 and Chi-Med's other SEC filings, copies of which are available on Chi-Med's website (www.chi-med.com).

Use of Non-GAAP Financial Measures - This presentation includes certain non-GAAP financial measures. Please see the appendix slides titled "Non-GAAP Financial Measures and Reconciliation" for further information relevant to the interpretation of these financial measures and reconciliations of these financial measures to the most comparable GAAP measures.

Building a global science-focused biopharma from an established base in China

Realizing the **global potential of Chi-Med's novel oncology assets**

Building a **fully integrated oncology business** in **China**

Our strengths

Fully integrated platform built over 20 years

World-Class Discovery & Development Capability

First global-focused novel drug discovery company in China – est. 2002

~550 integrated R&D staff focused on oncology & autoimmune disorders

Highly Differentiated NME Portfolio & Global Pipeline

9 innovative clinical stage NMEs – all discovered in-house by Chi-Med

3 lead assets NDA filed/ approved in China – all in late global development

Seasoned MNC Mgmt. Team – Strong Governance

11 years – median tenure with Chi-Med of 14 person senior mgmt. team

0 governance issues during fourteen years as a listed company

Deep Pan-China Market Access Commercial Platform

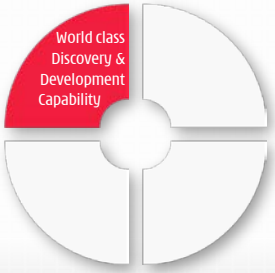
~2,300 person China Rx Sales team – covering about 320 cities

320+ person new oncology commercial team – covering 1,300 cancer centers in China [1]

[1] By June 2020; NME = Novel Molecular Entity.

World class discovery engine

Most prolific & validated in China biotech



CHI-MED

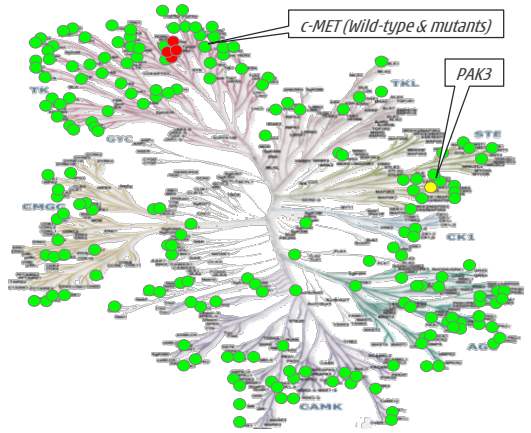
Focus on Global Quality Innovation Proven & Validated at all Levels

- ***15+*** year track record in oncology, fully integrated ~550 person in-house scientific team
- ***40+*** oncology indications in development. 9 clinical TKIs incl. VEGFR, c-MET, PI3Kδ, Syk, FGFR & IDH
- ***10+*** combo therapy trials with chemo, TKI & IO drugs. Our superior selectivity enables combinations
- ***5*** further in-house late pre-clinical molecules
- ***2*** validating collaborations

AstraZeneca — *Savolitinib 2011 Global deal*

Lilly — *Fruquintinib 2013 China deal*

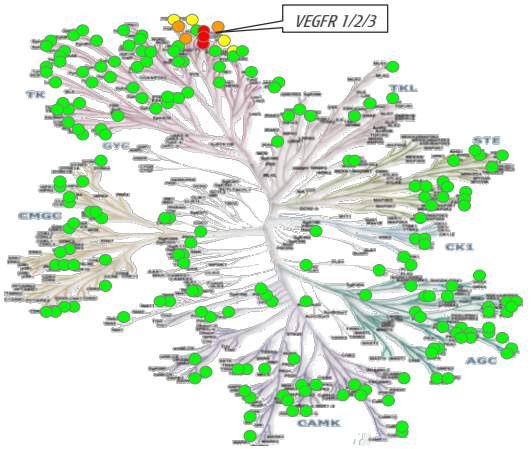
Chi-Med's Advanced Chemistry Approach Provides Superior Selectivity Profiles



Savolitinib

~1,000 times

more selective to c-MET than next kinase (PAK3)[1]



Screening at 1μM against 253 Kinases

- ›90% inhibition
- 70-90% inhibition
- 40-70% inhibition
- ‹40% inhibition

ELUNATE® Fruquintinib Capsules

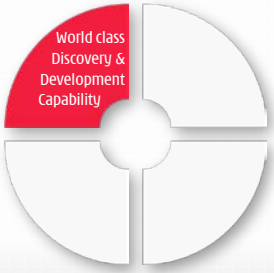
~250 times

more selective to VEGFR3 than next non-VEGFR kinase (Ret)[2]

[1] W. Su, et al, 2014 American Association of Cancer Research; [2] Sun et al., Cancer Biology & Therapy 15:12, 1635--1645; December 2014.

Deep global development infrastructure

Track record of breakthroughs



CHI-MED

- **Integrated development team** of ~120 C&R & ~200 CMC staff located in Shanghai, Suzhou & Florham Park, New Jersey
- **Broad bandwidth & capacity** of R&D team enables smooth coordination of **>25 clinical trials globally & in China**
- **Important working relationships with China & global regulators** - potentially multiple new global registration studies in 2021

- **At launch / filing stage on 3 lead assets** - major regulatory achievements

Elunate® (Fruquintinib)

- **1st ever** China-discovered & developed targeted oncology therapy to receive **unconditional approval**
- **2nd fastest** NCE NDA approval **in NMPA history**
- China-only partnership with Lilly, **Chi-Med to commercialize in China effective October 1, 2020**
- **Global Ph.III underway mid-2020** - over 100 sites in US, EU & Japan
- **FDA Fast Track Designation**

Savolitinib

- **NDA submission with NMPA in May 2020**, based on 70 patient Ph.II, effectively Breakthrough Therapy. **Priority Review status in China**
- Global partnership with AstraZeneca, **Chi-Med responsible for running all China development & regulatory activities**
- AstraZeneca global - **potential 3 registration studies in 2021**

Surufatinib

- **NDA submission in Nov 2019**, obtained **NMPA priority review** (expected to launch in late 2020)
- **2 FDA Fast Track Designations** with pathway to target **US NDA submission at end 2020** using China Ph.IIIs & US Ph.Ib/II data
- Planning for **US launch end 2021**. EU to follow

Maximizing the value of our lead assets

Potential 5 NDAs filed & 8 reg. studies by 2020/2021

CHI-MED

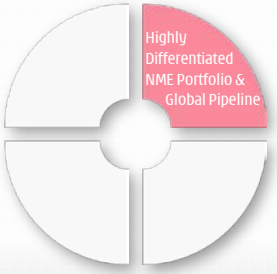
Differentiated portfolio

Designed for global registration – 13 discovered assets



CHI-MED

Product	MOA	Discovery [1]	Indications	Partner	Rights	[2]	[2]
Elunate®	VEGFR 1/2/3	In-house (est. LOE ~2033)	Colorectal, gastric, NSCLC, solid tumors (multiple I/O & TKI combos)	Lilly	HCM has WW rights ex-China; 70%-80% of sales in China [4]	**Marketed** (Colorectal); **Ph.III** (Gastric)	**Ph.III** US, EU, JPN (Colorectal)
Savolitinib	c-MET	In-house (est. LOE ~2035)	NSCLC, kidney, gastric [3], colorectal [3] (multiple I/O & TKI combos)	AZ	AZ has WW rights; China (30% royalty); ex-China (9-18% tiered royalty)	**NDA filed** (NSCLC)	**Ph.II/III** global (multiple NSCLC) **Ph.III** global (PRCC)
Surufatinib	VEGFR 1/2/3, FGFR1 & CSF-1R	In-house (est. LOE ~2035)	Neuroendocrine tumors (NET), biliary tract, thyroid, solid tumors (multiple I/O combos)	None	HCM holds all WW rights	**NDA filed** (NET)	Target **NDA filing in US late 2020**
HMPL-523	Syk	In-house (est. LOE ~2037)	B-cell malignancies – indolent non-Hodgkin's lymphoma (NHL)	None	HCM holds all WW rights	**Ph.Ib/II** (Treated >200 NHL pts.)	**Ph.I** US, EU, Aus (NHL)
HMPL-689	PI3Kδ	In-house (est. LOE ~2040)	B-cell malignancies – indolent NHL	None	HCM holds all WW rights	**Ph.Ib/II** (Treated >100 NHL pts.)	**Ph.I** US, EU, Aus (NHL)
HMPL-453	FGFR 1/2/3	In-house (est. LOE ~2039)	Malignant mesothelioma, cholangio-carcinoma, bladder	None	HCM holds all WW rights	**Ph.II** (Mesothelioma)	-
Epitinib	EGFRm+	In-house (est. LOE ~2032)	Glioblastoma, NSCLC	None	HCM holds all WW rights	**Ph.II** (Glioblastoma)	-
HMPL-306	IDH 1/2	In-house (est. LOE ~2043)	Hematological malignancies, solid tumors	None	HCM holds all WW rights	**Ph.I in planning** (start mid-2020)	**Ph.I in planning** (start H2 2020)
HMPL-295	Not Disc.	In-house	Solid tumors	None	HCM holds all WW rights	Target **IND end 2020** (China)	
HMPL-653	Not Disc.	In-house	Solid tumors	None	HCM holds all WW rights	Target **IND 2021** (US/China)	
HMPL-A83	Not Disc.	In-house	mAb – solid tumors, haematological malignancies	None	HCM holds all WW rights	Target **IND 2021** (US/China)	
HMPL-760	Not Disc.	In-house	Hematological malignancies	None	HCM holds all WW rights	Target **IND 2021** (US/China)	

[1] Approximate estimated Loss of Exclusivity (LOE) in key markets considering multiple patent families, extension, and regulatory protection; [2] Represents the most advanced clinical trial stage and indication; [3] Investigator initiated trials (IITs);
[4] Subject to meeting pre-agreed sales targets, Lilly will pay Chi-Med an estimated total of 70%-80% of Elunate® sales in the form of royalties, manufacturing costs and service payments.

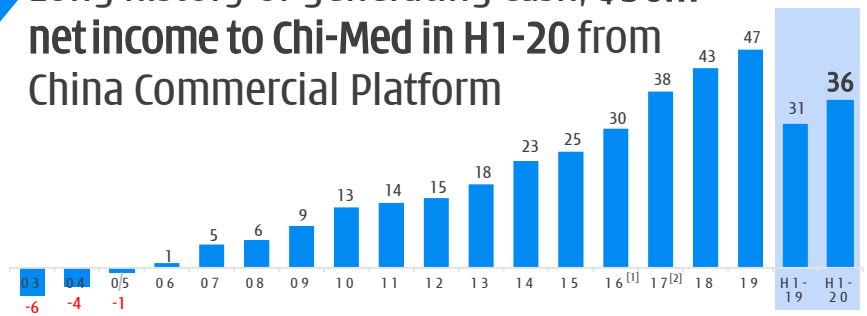
Significant China Commercial Platform

Proven commercial capabilities & deep market access

CHI-MED

Established China Rx Commercial Platform

- ~19 yrs' experience operating in China's complex **medical system**, Chi-Med mgmt. runs all day-to-day China Rx commercial operations
- ~2,300 **Rx sales team** – significant national footprint, including about **320 cities & towns; >22,100 hospitals, & >74,000 physicians**
- Long history of generating cash; **$36m net income to Chi-Med in H1-20** from China Commercial Platform



Compliant & adaptable across many TAs

- **Successfully marketed 3rd party MNC products** Concor® (Merck - CV) & Seroquel® (AstraZeneca - CNS)[3]. **Global MNC compliance standards**

Oncology Commercial Platform & Ambition

- Committed to ongoing significant **investment in oncology commercial platform**
- First unpartnered oncology drug **target late 2020 launch** (surufatinib in neuroendocrine tumors)
- Dedicated oncology team on-track: **320+ FTEs by June 2020 covering ~1,300 hospitals in 30 provinces / municipalities**

High-caliber Team & Rx Commercial Platform

Deep Market Access & Know-how

Compliance, Scale & Profitability in China

Note: excludes land compensation gains and R&D related subsidies in [1] 2016: $40.4m and [2] 2017: $2.5m; [3] Distribution of Seroquel® has been discontinued.

CHI-MED

AstraZeneca

AstraZeneca and Chi-Med

Harnessing the power of Chinese Innovation

1 Savolitinib

Savolitinib – selective MET inhibitor

FAST APPROVAL OF MONOTHERAPY

PAPILLARY RCC

~8% RCC. No biomarker therapies approved.

EXON14 MUTATION NSCLC

NDA under review: Priority Review.
First in China. Global in planning.

COMBINATION OPPORTUNITIES

PD-L1 COMBINATION

Preliminary signal with Imfinzi®.
Exploring further.

POST-EGFR TKI NSCLC

~30% Tagrisso®-resistant pts.
(Tag. 2019 $3.2bn, #1 globally).

› Global collaboration with AstraZeneca

Global

China

Note: Market size and patient population estimates are from Frost & Sullivan.

Savolitinib – MET inhibitor

Current development status

Strong position in NSCLC

- **MET Exon 14m** – NDA accepted in May 2020 & priority review;
- Global Ex.14 study in planning;
- **Savo/Tagrisso®** – Enrollment continues apace.

Renewed RCC strategy

- **Savo monotherapy** – ~60 pt. SAVOIR data; Restart in PRCC;
- **Savo/Imfinzi® combo** – Prelim. durable efficacy & tolerability.

Other exploratory studies

- **Gastric monotherapy** – 50% ORR;
- Exploring colorectal.

Global China

Indication	Treatment	Target Patient	Study Name	Dose Finding / Safety Run-in	Proof-of-concept	Registration

	Savolitinib	MET+ Colorectal cancer *				

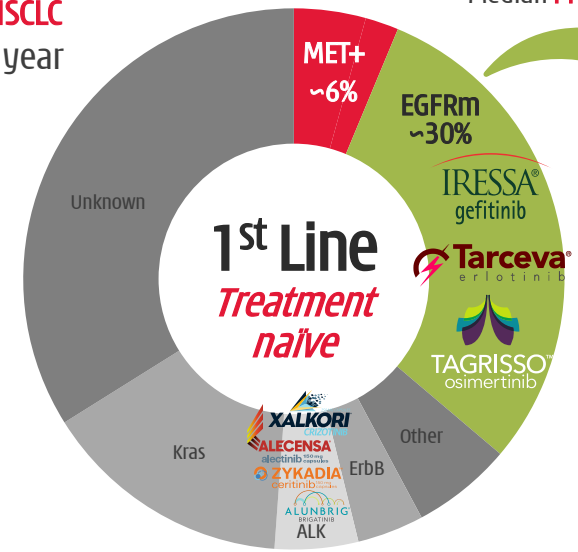
* Investigator initiated trials (IITs); ** In planning

Savolitinib

Biggest opportunity is MET+ NSCLC

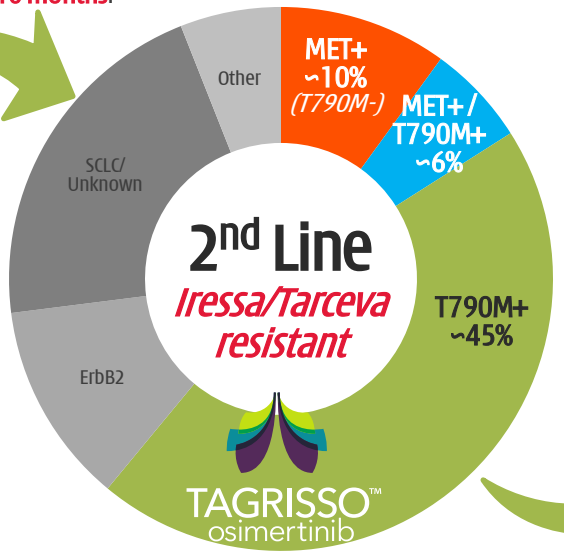
Primary NSCLC

1.8 million NSCLC patients per year



All **Iressa/Tarceva** patients relapse
Median **PFS 9-10 months**.

Resistance-driven EGFRm+ NSCLC



All **Tagrisso** patients relapse
2L Median **PFS 9-10 months**.

	Target	Launch	2019 ($m)[3]
Iressa	EGFRm	2003	423
Tarceva	EGFRm	2004	300
Tagrisso	EGFRm / T790M	2015	3,189
Xalkori	ALK / ROS1 / MET	2011	530
Alecensa	ALK	2015	881
Alunbrig	ALK	2017	60
Total Sales			5,383

Launch	2016	2017	2018	2019
Dec-15	423	955	1,860	3,189 (+74%)

TAGRISSO™ osimertinib

Est. global sales of ~$6-8 bn by 2023[2].

[1] Primary drivers, based on aggregate rocelitinib/Tagrisso data published at 2016/2017 ASCO; [2] Research estimates & including adjuvant approval; [3] company annual reports and Frost & Sullivan.

Savolitinib – MET Exon 14 skipping NSCLC

China NDA accepted in May 2020; data at AACR19 & ASCO20

1. MET Exon14 skipping NSCLC NDA filed

2019

Mar '19 –
Oral AACR Pres.
- 41 patient data

Jun-Jul '19 -
Study fully enrolled (n~70)

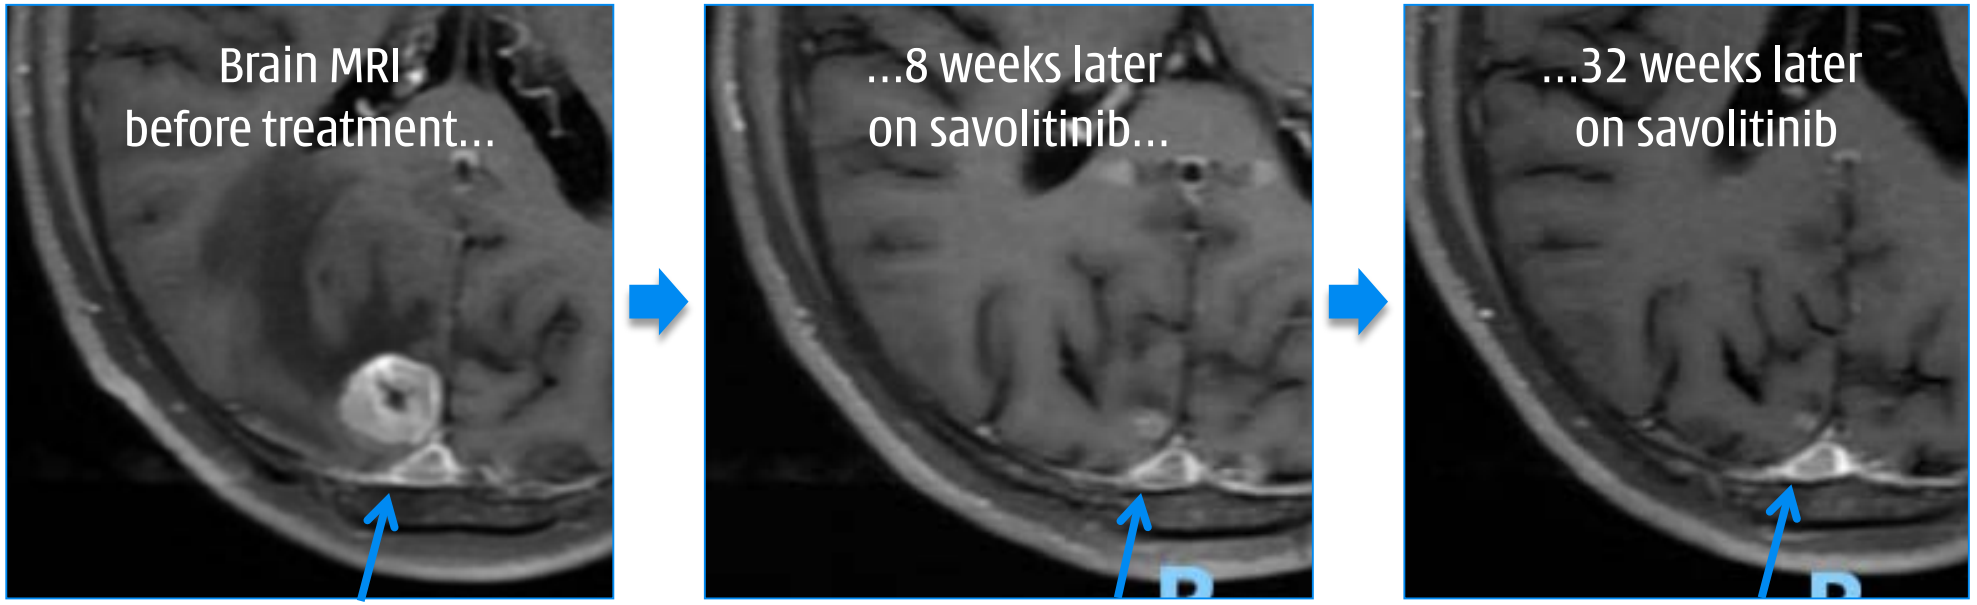
Topline results

2020

May 28, '20 – NDA accepted
- Prior CDE[1] discussion
- Final results
- Incl. global safety data

May 29, '20 -
2020 ASCO Virtual Scientific Program
- 70 patient data

2. Anti-tumor activity observed in brain mets.[2]



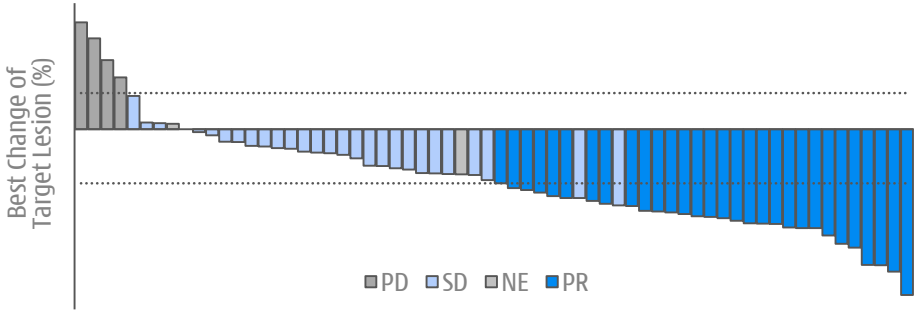
[1] Center for Drug Evaluation of the National Medical Products Administration of China; [2] Lu S et al, Abstract #5707, presented at the 22nd Annual Meeting of the Chinese Society of Clinical Oncology, in Xiamen, China on Sept 20, 2019.

Savolitinib – MET Exon 14 skipping NSCLC [1]

China NDA accepted in May 2020; global dev. in planning

1. Encouraging single agent anti-tumor activity [2]

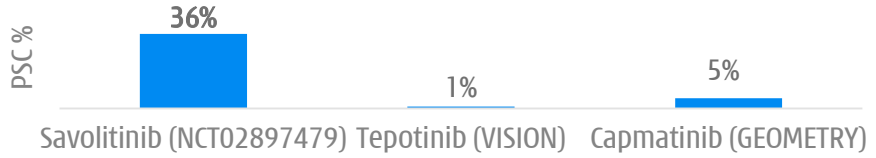
	Efficacy Evaluable (N=61)	Full Analysis (N=70)
ORR, % [95% CI]	49.2 [36.1, 62.3]	42.9 [31.1, 55.3]
DCR, % [95% CI]	93.4 [84.1, 98.2]	82.9 [71.2, 90.8]



2. Generally well-tolerated [2]

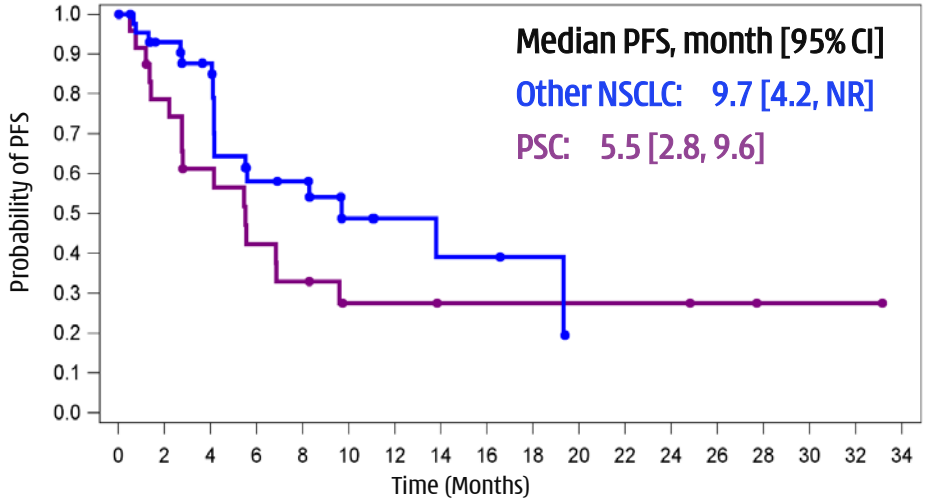
	n (%)
Treatment related serious AE	18 (25.7)
Leading to discontinuation	10 (14.3)
Treated related AE Grade ≥3	29 (41.4)
Peripheral edema	5 (7.1)
Aspartate aminotransferase increased	9 (12.9)
Alanine aminotransferase increased	7 (10.0)

3. Savo study had 36% pts with PSC, a more aggressive NSCLC sub-type, vs. 1-5% in VISION/GEOMETRY



- PSC standard of care is chemotherapy [3]
  - ↗ ORR: **16.5%**; mPFS: **2 months**; mOS: **6.3 months**

4. DoR, PFS, & OS outcomes are maturing [3]



[1] The trial is focused on patients with MET Exon 14 mutation who have failed prior systemic therapy, or are unable to receive chemotherapy, however the target patient population is intended to be all MET Exon 14 mutation patients; [2] Data cut-off March 31, 2020. Lu S et al, Abstract # 9519, poster presentation at ASCO20 Virtual Conference May 29-31, 2020; [3] PSC = Pulmonary Sarcomatoid Carcinoma, Vieira, Thibault et al., Journal of Thoracic Oncology, Volume 8, Issue 12, 1574 - 1577.

TAGRISSO™ osimertinib + savo in EGFR TKI refractory NSCLC

TATTON B & D data – efficacy

	TATTON Part B: osimertinib 80 mg + savolitinib 600 mg [1]			TATTON Part D: osimertinib 80 mg + savolitinib 300 mg
	Part B1 (n=69) Prior third-generation EGFR-TKI	**Part B2 (n=51)** No prior third-generation EGFR-TKI (T790M negative)	**Part B3 (n=18)** No prior third-generation EGFR-TKI (T790M positive)	**Part D (n=36)** No prior third-generation EGFR-TKI (T790M negative)
Objective response rate*, % [95% CI]	**30%** [20, 43]	**65%** [50, 78]	**67%** [41, 87]	**64%** [46, 79]
Complete response, %	0	0	0	0
Partial response, %	30%	65%	67%	64%
Non-response, %				
Stable disease (≥ 6 weeks)	45%	24%	33%	28%
Progressive disease	10%	6%	0	3%
Not evaluable	14%	6%	0	6%
Disease control rate#, % [95% CI]	**75%** [64, 85]	**88%** [76, 96]	**100%** [81, 100]	**92%** [78, 98]
Median DoR, months [95% CI]	**7.9** [4.0, 10.5]	**9.0** [6.1, 22.7]	**12.4** [2.8, NR]	**8.0** [4.5, NR]
Median PFS, months [95% CI]	**5.4** [4.1, 8.0]	**9.0** [5.5, 11.9]	**11.0** [4.0, NR]	**9.1** [5.4, 12.9]

No reduction in efficacy with 300mg savo – SAVANNAH converted to 300mg dose

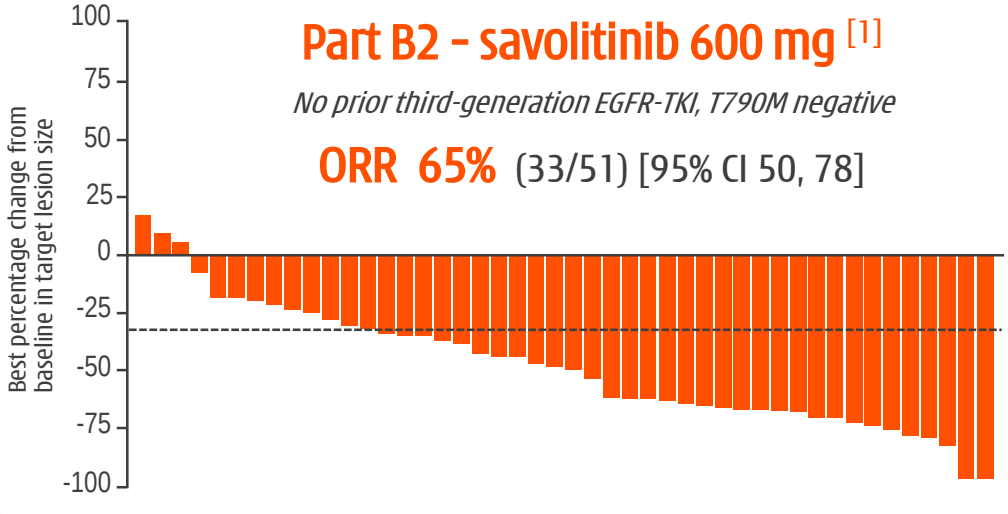
[1] Most patients were enrolled to Part B1, B2, B3 on 600 mg savolitinib, prior to weight-based dosing implementation, but following a protocol amendment in response to a safety signal of hypersensitivity, the final 21 patients enrolled in Part B were dosed with savolitinib by body weight as follows: patients who weighed ≤55 kg (n=8) received 300 mg daily and those weighing >55 kg (n=13) received 600 mg daily; Best response data are for patients who had an opportunity to have two follow-up scans;
* Complete or partial response confirmed at ≥4 weeks. # Disease control rate = confirmed complete response + confirmed partial response + stable disease at ≥5 weeks; CI, confidence interval; NR, not reached.

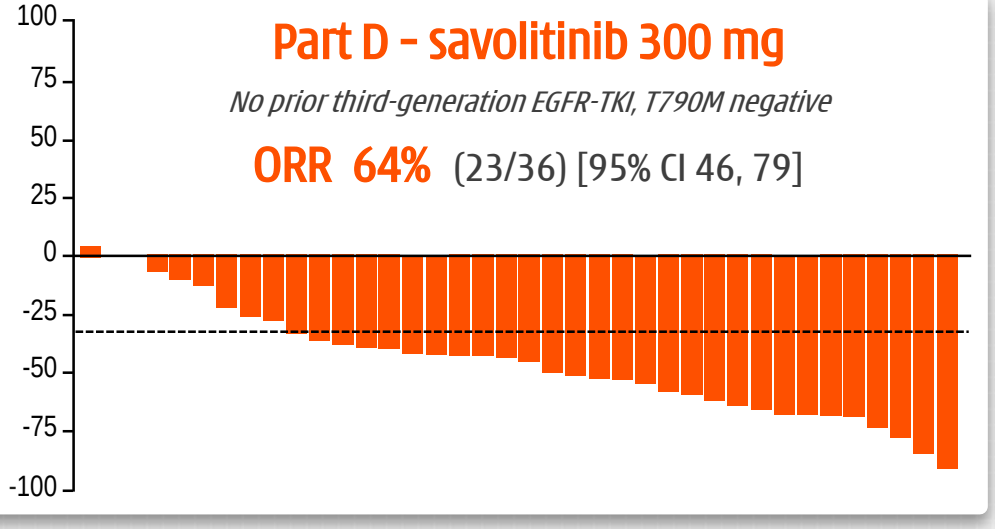
Sequist LV, Han JY, Ahn MJ, et al. Osimertinib plus savolitinib in patients with EGFR mutation-positive, MET-amplified, non-small-cell lung cancer after progression on EGFR tyrosine kinase inhibitors: interim results from a multicentre, open-label, phase 1b study. Lancet Oncol. 2020; S1470-2045(19)30785-5. doi:10.1016/S1470-2045(19)30785-5.

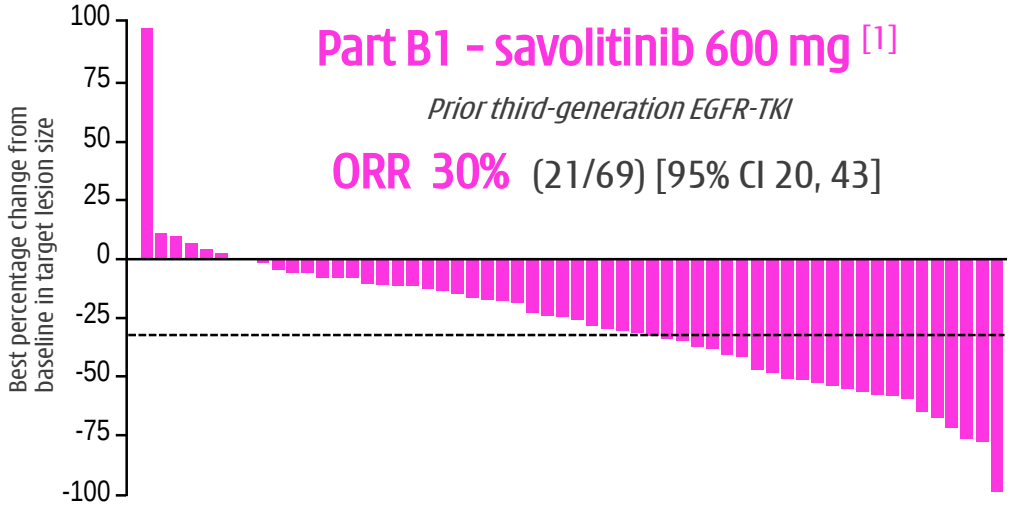
TATTON B & D data - ORR

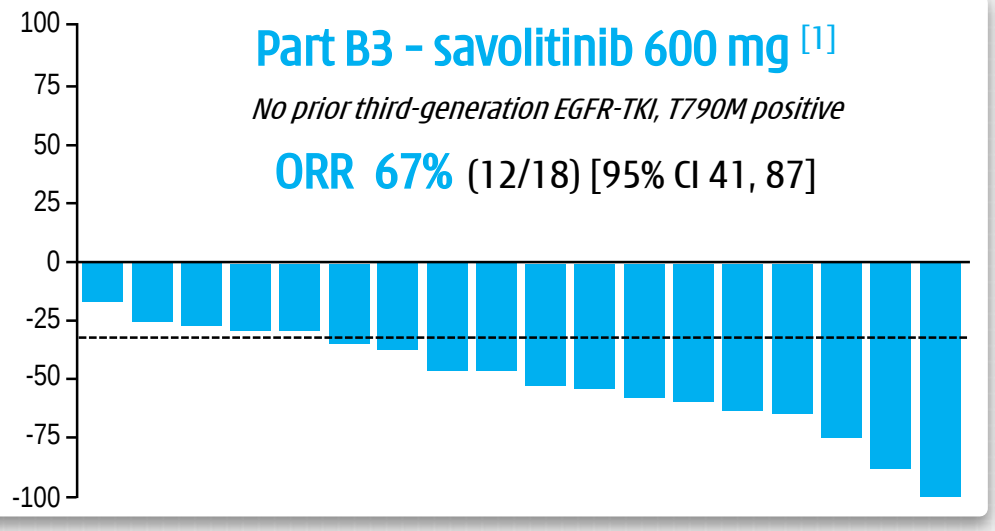
TAGRISSO™ osimertinib + savolitinib in EGFR TKI refractory NSCLC

CHI-MED





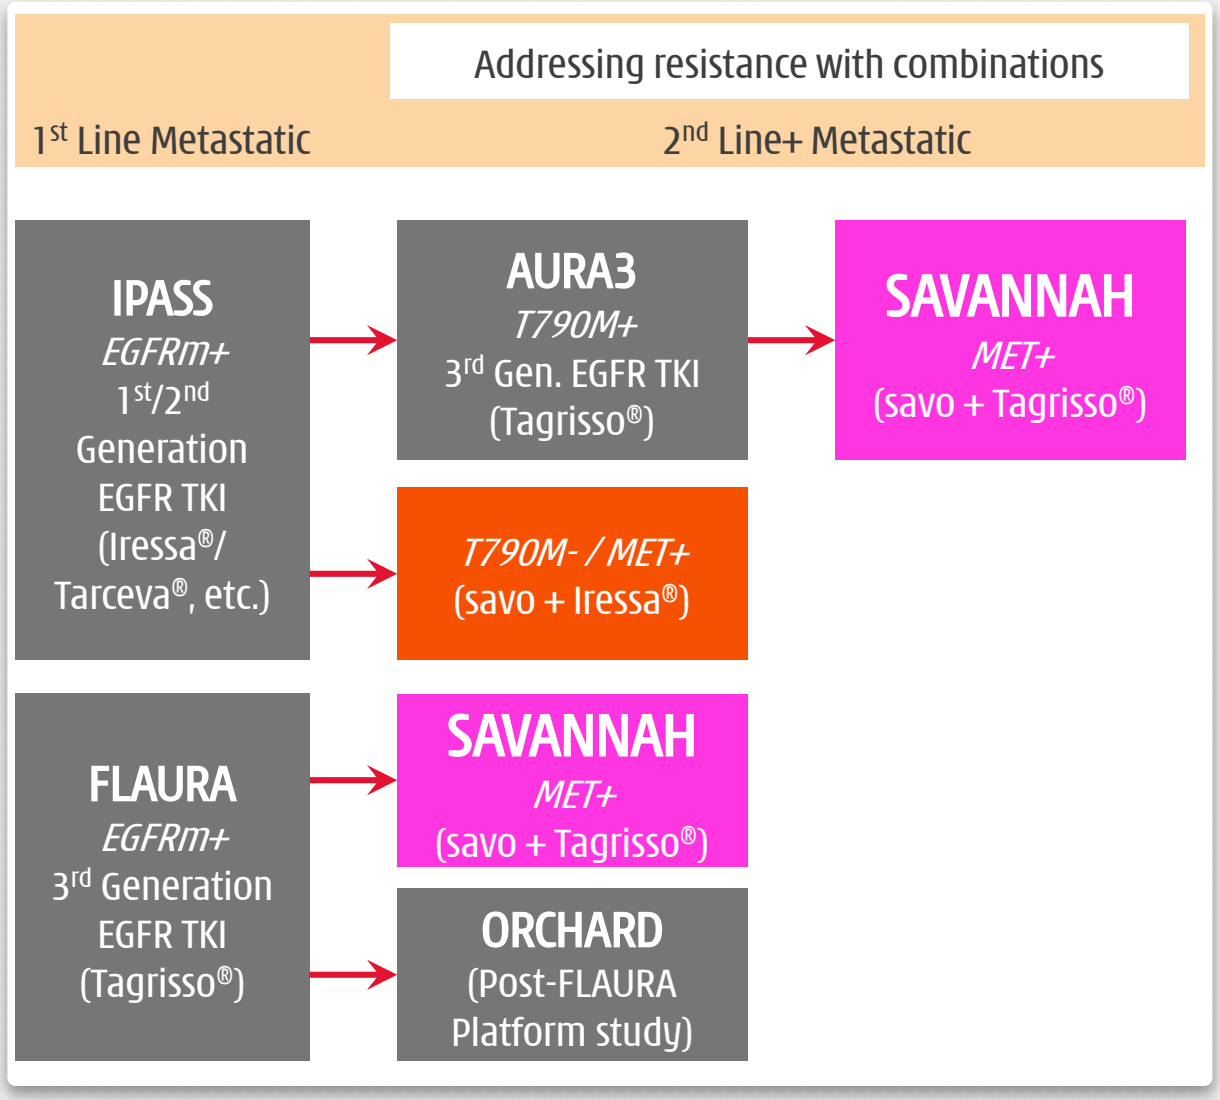




ORR = Objective Response Rate; EGFR = Epidermal Growth Factor Receptor; TKI = Tyrosine Kinase Inhibitor; [1] Most patients were enrolled to Part B1, B2, B3 on 600 mg savolitinib, prior to weight-based dosing implementation, but following a protocol amendment in response to a safety signal of hypersensitivity, the final 21 patients enrolled in Part B were dosed with savolitinib by body weight as follows: patients who weighed ≤55 kg (n=8) received 300 mg daily and those weighing >55 kg (n=13) received 600 mg daily.

TAGRISSO™ osimertinib + savo in EGFR TKI refractory NSCLC

SAVANNAH – global registration-intent study



SAVANNAH *(NCT03778229)*

Phase II single-arm study:

- Global – N. & S. America, Eur., & Asia.
- Primary endpoint ORR.
- Secondary endpoints: PFS, OS, DoR & percent change in tumor size.
- Conducted 1st internal interim analysis; early interim efficacy & safety data is now under review.
- Enrollment continues apace in 13 countries.

ORCHARD study *(NCT03944772)*:

- Post FLAURA Platform study offering targeted treatments for all patients – expect high enrollment.
- MET+ patients prioritize to SAVANNAH.

PRCC – unmet medical need

Lower response rates to treatments

1. Limited treatment options for non-ccRCC

Several approved therapies in ccRCC [3]

Immunotherapy setting new treatment paradigm

FIRST LINE – clear-cell RCC [4]	ORR	mPFS	mOS
Placebo (avg. multiple studies)	~2%	~3.5	~15.0
Torisel® (mTOR)	8.6%	5.5	10.9
VEGFR, multi-kinase small molecule (multiple compounds)	12-31%	6-11	21-28
Opdivo® + Yervoy® (PD-1/CTLA-4 immunotherapy) [5]	42%	~11.6	NR

2. RCC est. ~$13.0 bn. market by 2030 [1]

Clear-cell RCC (~$10.4b)

~80% of RCC

~ 290k new patients/yr. [2]

Non-Clear-cell RCC (~$2.6b)

~20% of RCC

~ 73k new patients/yr.[2]

3. Unmet medical need:

MET+ Papillary RCC (~$1.0b)

~8% of RCC

~ 28k new patients/yr.[2]

MET- Papillary RCC (~$1.0b)

~8% of RCC

~ 28k new patients/yr.[2]

Other non-ccRCC (~$0.6b)

~5% of RCC

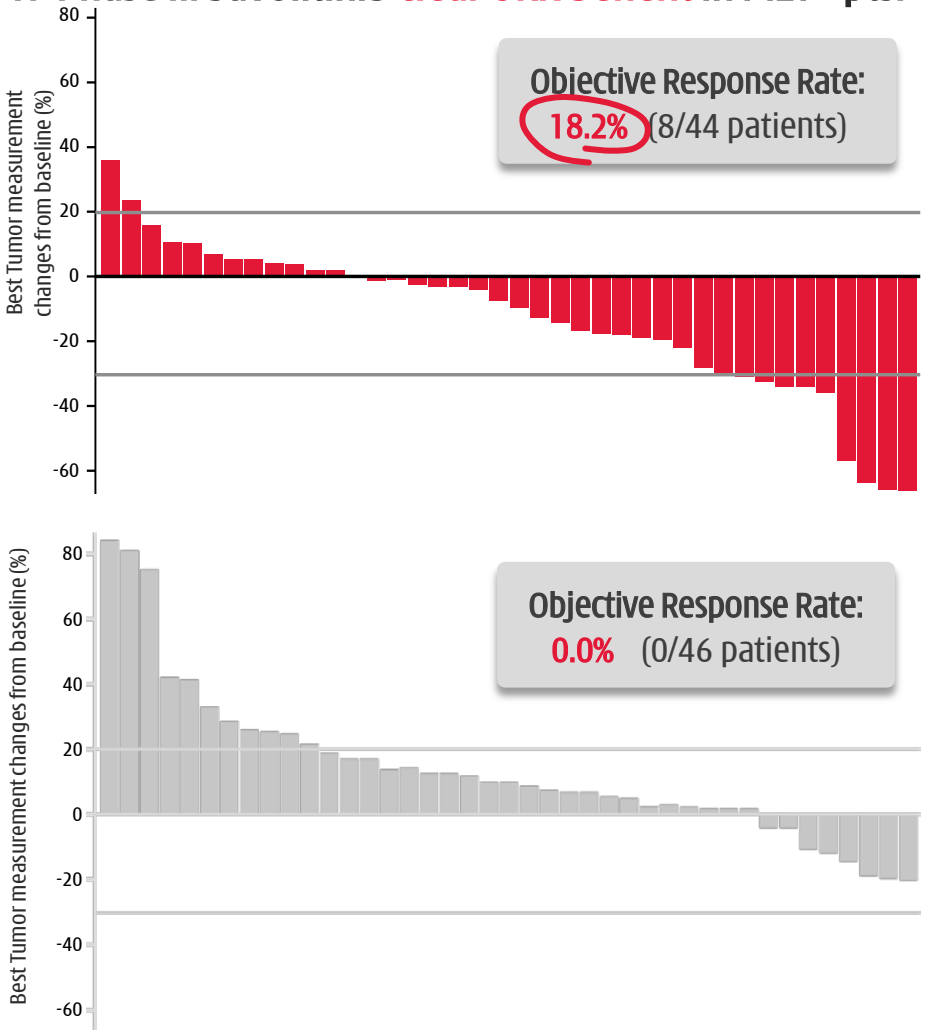
~ 16k new patients/yr.[2]

[1] Frost & Sullivan; [2] Frost & Sullivan, based on US incidence mix and global incidence rate in 2018; [3] NCCN Guideline for kidney cancer (Version 1.2020, June 7, 2019) preferred or category 1 options, RCC = renal cell carcinoma;
[4] ORR = Objective Response Rate, mPFS = median Progression-Free Survival, mOS = median Overall Survival, NR = not reached; For approved subgroup of patients; [5] only approved for patients with intermediate or poor risk RCC.

Savolitinib in PRCC

Phase II study's encouraging efficacy led to SAVOIR Phase III [1]

1. Phase II: Savolitinib clear ORR benefit in MET+ pts.



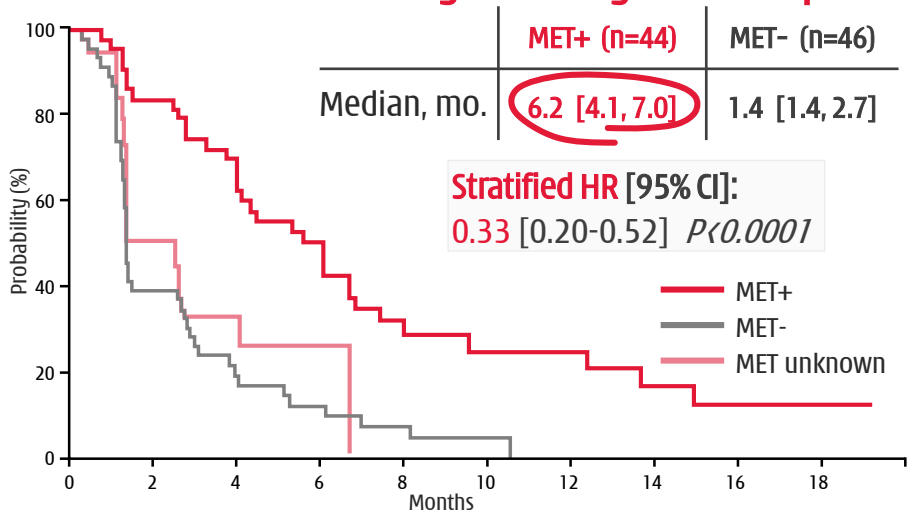
3. Phase II: Disease Control Rate ("DCR") – advantage in MET+ with DCR 73.2% vs. MET- 28.2%.^

Tumor responses in the overall treatment population and by MET status

RECIST response, n (%)	MET+ (n=44)	MET- (n=46)	MET unknown (n=19)	Total (n=109)
Partial Response†	8 (18.2%)*	0 (0.0%)	0 (0.0%)	8 (7.3%)
Stable Disease	22 (50.0%)	11 (23.9%)	5 (26.3%)	38 (34.9%)
Progressive Disease	11 (25.0%)	28 (60.9%)	9 (47.3%)	48 (44.0%)
Not Evaluable	3 (6.8%)	7 (15.2%)	5 (26.3%)	15 (13.8%)

* P=0.002 versus MET-independent subgroup (Fisher exact test). Responses assessed according to RECIST version 1.1. † Unconfirmed responses excluded. ^ Evaluable patients.

4. Phase II: Median PFS – big advantage in MET+ pts.



Source: Choueiri TK, Plimack E, Arkenau HT, et al. Biomarker-Based Phase II Trial of Savolitinib in Patients With Advanced Papillary Renal Cell Cancer. J Clin Oncol. 2017;35(26):2993-3001. doi:10.1200/JCO.2017.72.2967

[1] In late 2018, enrollment was terminated in SAVOIR, a global Phase III registration study of savolitinib monotherapy compared with sunitinib monotherapy in MET-positive PRCC. Data from the approximately 60 patients randomized in SAVOIR prior to termination has matured during 2019 and will be presented at an upcoming scientific conference in mid-2020.

Savolitinib in PRCC

SAVOIR 60 pt. data - actively evaluating progressing clinical work

SAVOIR timeline

2017	2018	2019
Study initiation Planned number of pts = 180 (90 savolitinib / 90 sunitinib)	Enrollment stopped 60 pts enrolled (33 savolitinib / 27 sunitinib)	Data cut-off (DCO) 23 pts remained on therapy (14 savolitinib / 9 sunitinib)

Anti-tumor activity - All 9 savo responders remained in response at DCO

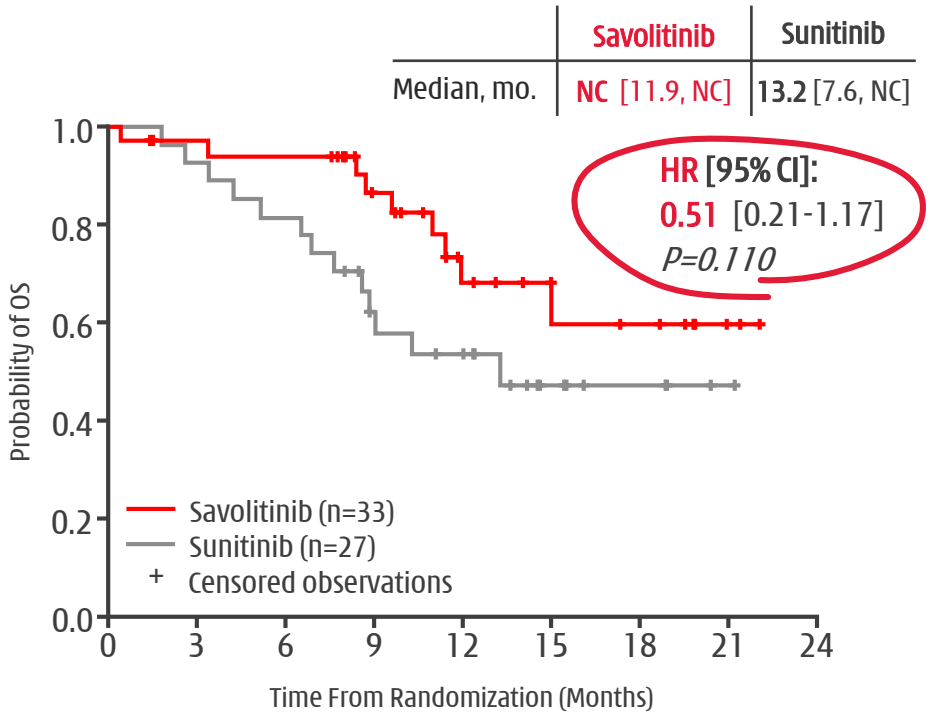
[95% CI]	Savolitinib (N=33)	Sunitinib (N=27)
ORR*	9 (27) [13.3, 45.5]	2 (7) [0.9, 24.3]
PFS	7.0 [2.8, NC]	5.6 [4.1, 6.9]
	Hazard Ratio: 0.71 [0.37, 1.36]	
DCR @ 6 months	16 (48) [30.8, 66.5]	10 (37) [19.4, 57.6]
@ 12 months	10 (30) [15.6, 48.7]	6 (22) [8.6, 42.3]

* One out of two sunitinib responders remained in response at DCO

Better tolerability - 42% savo vs 81% sunitinib AE Gr.≥3

	Savolitinib (N=33)	Sunitinib (N=27)
Treatment related AE Grade ≥3	8 (24)	17 (63)
Any AE Grade ≥3	14 (42)	22 (81)
Anemia	0	4 (15)
Hypertension	0	4 (15)
AST increased	5 (15)	2 (7)
ALT increased	4 (12)	2 (7)

Strong signal of potential overall survival benefit



Choueiri TK, et al. Efficacy of Savolitinib vs Sunitinib in Patients With MET-Driven Papillary Renal Cell Carcinoma: The SAVOIR Phase 3 Randomized Clinical Trial. JAMA Oncol. Published online May 29, 2020. doi:10.1001/jamaoncol.2020.2218

Exploring Savolitinib + PD-L1 inhibitor

CALYPSO Savo/Imfinzi® combo tolerable, w/ durable efficacy

IMFINZI™ durvalumab

CHI-MED

1. Could MET + PD-L1 inhibition be synergistic?

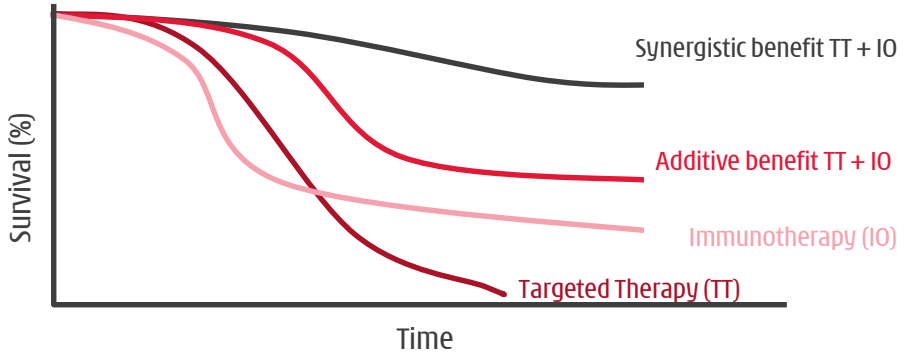


Illustration by Tracy L Rose MD MPH at ASCO GU 2019 presentation, showing what synergistic vs additive benefit could hypothetically look like; not based on clinical data.

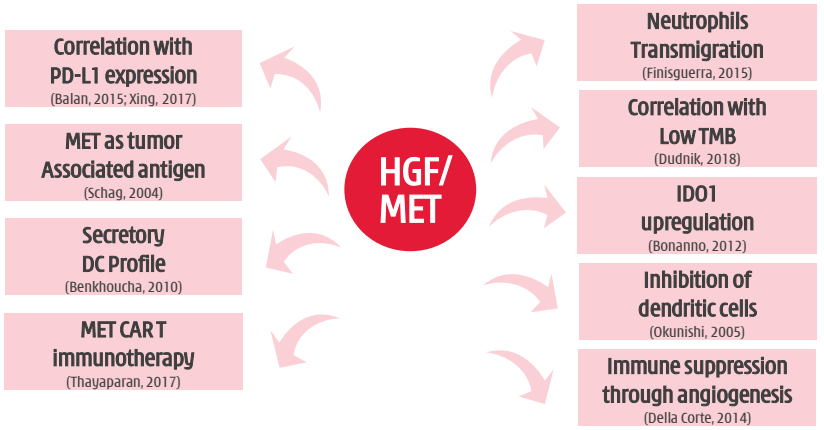
2. MET/HGF complex interplay with immune system.



Papaccio et al Int J Molec Sciences, 2018; 19(3595)

3. PD-1/PD-L1s important in non-ccRCC but need to see mature mPFS/mOS & further biomarker analysis [1]

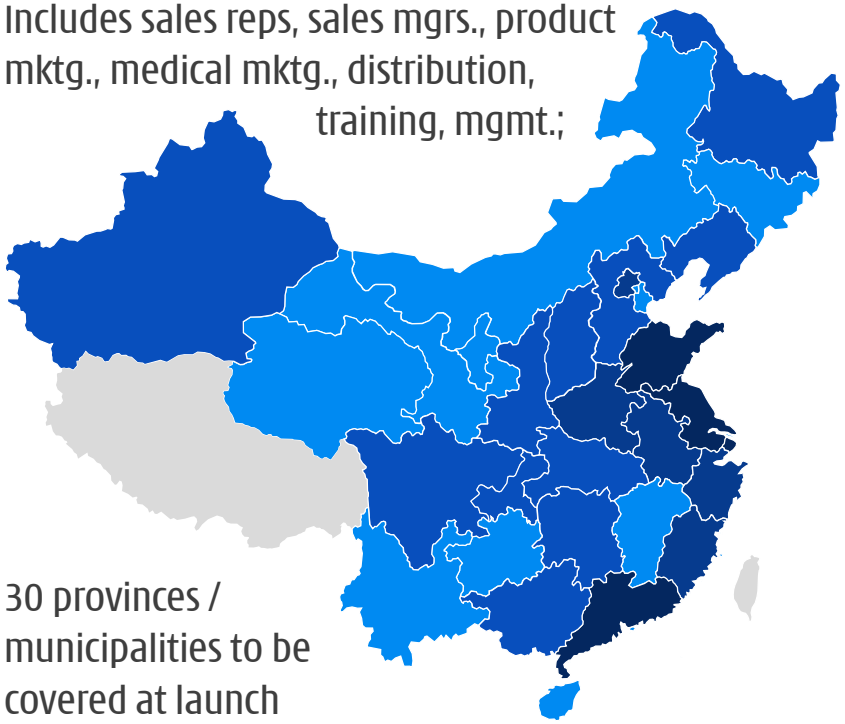
4 Commercialization & Next Wave of Innovation

›320 person dedicated oncology commercial team

Building on ›15 yrs Rx commercial knowhow in mainland China

To cover ~1,300 hospitals across China

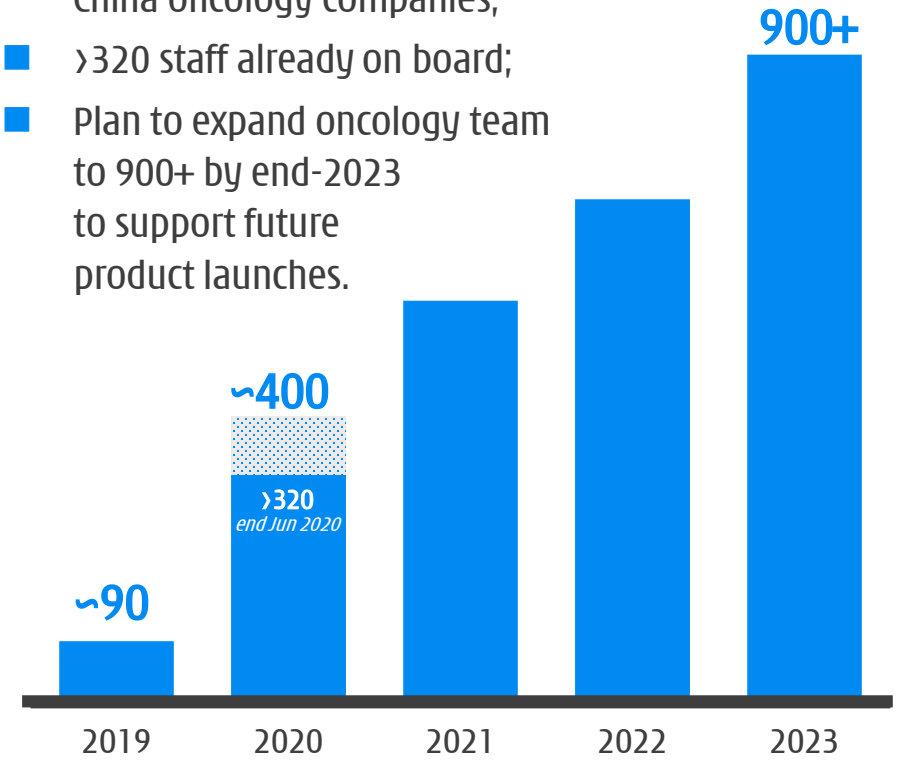
- Establishing dedicated oncology commercial team to cover ~95% of initial market opportunity;
- Fully in-place & in-training by Q3 2020;
- Includes sales reps, sales mgrs., product mktg., medical mktg., distribution, training, mgmt.;



- 30 provinces / municipalities to be covered at launch (›90% already covered).

Full suru launch team in place by mid-2020

- All key senior roles are already in-place;
- Vast majority of new staff from successful China oncology companies;
- ›320 staff already on board;
- Plan to expand oncology team to 900+ by end-2023 to support future product launches.



Oncology commercial team size at year end

Next wave of innovation

Development strategies and current status

HMPL-523 & HMPL-689

- China Ph.Ib dose expansions underway;
- China registration study decisions in 2020.

HMPL-523 & HMPL-689

- Over 20 Ph.I sites in U.S. & Europe enrolling;
- Multiple dose cohorts completed.

HMPL-453

- Ph.II initiated in advanced malignant mesothelioma in China;
- Ph.II in planning for cholangiocarcinoma in China.

HMPL-306

- 9th in-house discovered asset (IDH1/2) Ph.I;
- Addresses mutant IDH switching, from IDH1 to IDH2 or vice versa, a resistance mechanism.

Program	Treatment	Target Patient	Sites	Dose Finding / Safety Run-in	Proof-of-concept	Registration
HMPL-523 Syk	HMPL-523	Indolent NHL	US/EU/AU			
	HMPL-523	B-cell malignancies	China			
	HMPL-523	ITP	China			
HMPL-689 PI3Kδ	HMPL-689	Healthy volunteers	Australia			
	HMPL-689	Indolent NHL	US/EU			
	HMPL-689	Indolent NHL	China			
HMPL-453 FGFR 1/2/3	HMPL-453	Mesothelioma	China			
	HMPL-453	Solid tumors	China			
HMPL-306 IDH 1/2	HMPL-306	Hematological Malignancies	China			

Global

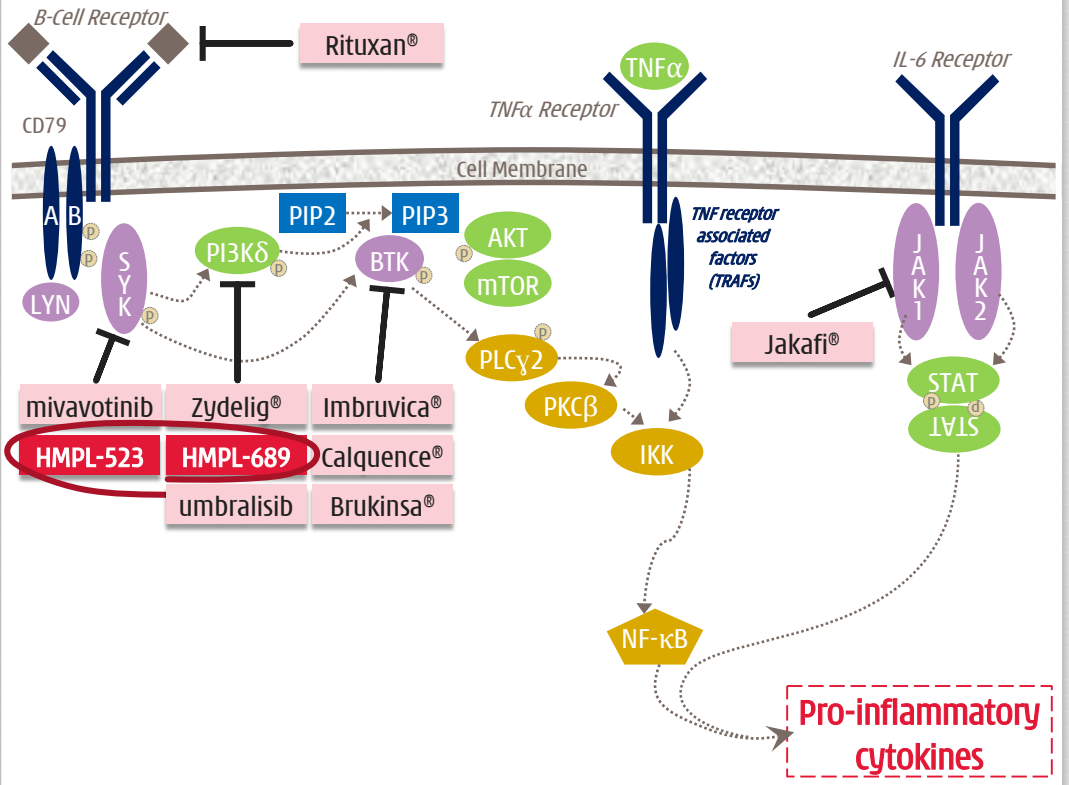
China

HMPL-523 (Syk) & HMPL-689 (PI3Kδ)

Exciting targets emerging - our next wave of innovation

The B-cell signaling is critical in hematological cancer with three breakthrough therapies recently approved.

- 2019 sales: Imbruvica® $5.7bn; Zydelig® $0.1bn; Jakafi® $2.8bn; & Rituxan® $4.8bn [1][2].



HMPL-523 (Syk inhibitor)

Large Phase Ib expansion in Australia & China

- Ph.I dose escalation complete in Australia & China (n›60) - RP2D [3] determined;
- **Large Ph. Ib dose expansion study (N›200)**, underway in ~30 active sites in Australia & China;
- **US/EU Phase I/Ib enrolling**, with 13 sites.

HMPL-689 (PI3Kδ inhibitor)

Phase I/Ibs in China, US & EU ongoing

Designed to be a best-in-class inhibitor of PI3Kδ

- **Improved isoform selectivity** (sparing PI3Kγ);
- **Improved potency at whole blood level** (›5x more potent than Zydelig) to cut compound related toxicity;
- **Improved PK** particularly efflux and drug/drug interaction due to CYP inhibition / induction, critical for combos.

Phase I/Ib data will **inform China registration study decisions on HMPL-523 & -689 in late 2020**.

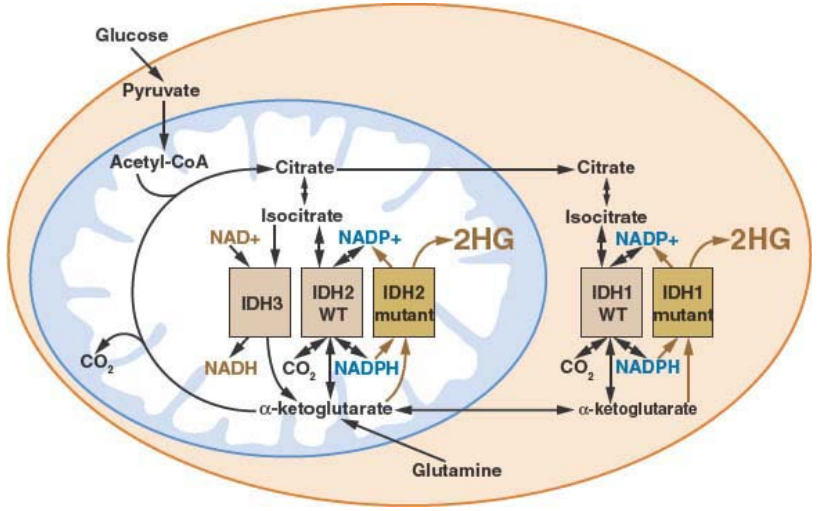
[1] Rituxan® sales in oncology only; [2] Approved Drug = ®; All others are clinical candidates; [3] Recommended Phase II Dose.

HMPL-306 – Phase I in China underway

Designed as potential best-in-class IDH 1/2 inhibitor

1. The IDH family converts isocitrate to α-KG via oxidative decarboxylation, an important process for normal cellular metabolism.

- Mutant IDH1/2 catalyze the reaction of α-KG to 2-HG, leading to accumulation of 2-HG in tumor cells;
- IDH inhibitors could restore 2-HG levels to normal physiological levels, induce tumor cell differentiation and ultimately stop tumor cell progression;
- **Mutant IDH isoform switching**, either from cytoplasmic mutant IDH1 to mitochondrial mutant IDH2, or vice versa, as a **mechanism of acquired resistance** to IDH inhibition.



2. Unmet medical need and potential indications – IDH1/2 mutations are frequent genetic alterations in AML, glioma and various solid tumors.

Tumor	% IDH Mutation [1]			
	Total	IDH1-R132	IDH2-R140	IDH2-R172
Brain tumor				
Grade 2 and 3 glioma	60-80%	60-80%	0%	1%
Secondary glioblastoma	70%	70%	0%	1%
Hematopoietic tumor				
Acute myelocytic Leukemia (AML)	15-25%	5-10%	5-15%	0-5%
Myelodysplastic syndrome (MDS)	10%	5%	5%	0%
Angioimmunoblastic T-cell lymphoma	26%	0%	1%	25%
Solid tumor				
Chondrosarcoma	55%	40%	0%	15%
Osteosarcoma	25%	0%	0%	25%
Cholangiocarcinoma	22%	20%	0%	2%
Giant cell tumors of bone	80%	0%	0%	80%

3. HMPL-306 is a potent IDH1/2 dual inhibitor.

- IDH1 & 2 mutations are **validated targets** with approval of ivosidenib (IDH1) and enasidenib (IDH2) in R&R AML;
- HMPL-306 provides **comparable efficacy** in preclinical model while **wider safety window**;
- The **higher penetration of blood-brain barrier** with HMPL-306 makes exploring IDHm glioma attractive.

[1] Amary et al., 2011; Paschka et al., 2010; Yan et al., 2009; Fujii T et al., 2016, Abstract 3101, AACR 2016.

What is next from discovery?

Differentiated assets against multiple targets

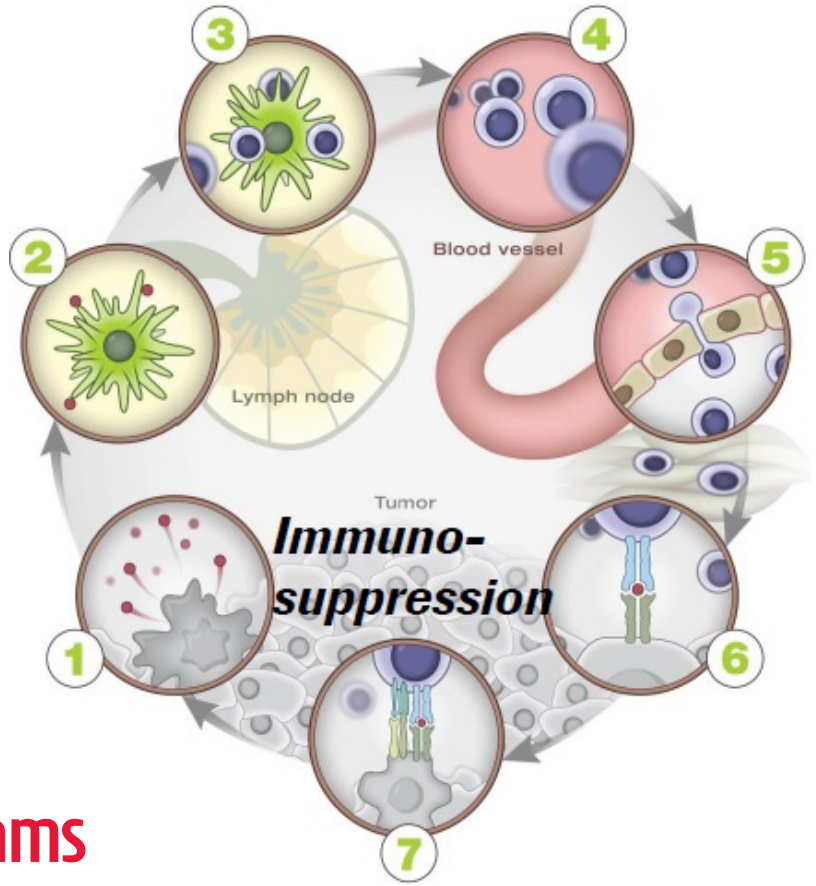
Priming & activations

- **Multiple mAb programs**

Antigen release

- MET (savolitinib)
- EGFR (epitinib/theliatinib)
- Syk (HMPL-523)
- PI3Kδ (HMPL-689)
- FGFR (HMPL-453)
- IDH 1/2 (HMPL-306)

- **Multiple small molecule programs**



Anti-angiogenesis

- VEGFR (fruquintinib)
- VEGFR/FGFR (surufatinib)
- FGFR (HMPL-453)

Negative regulators

- Treg (HMPL-689)
- CSF-1R (surufatinib)

- **Multiple small molecule & mAb programs**

Creating highest-quality range of assets against novel targets for use in combos

[1] Net Income / (Loss) attributable to Chi-Med; [2] at CER = at Constant Exchange Rate, which is a non-GAAP financial measure used to present period-to-period comparisons without the effects of currency movements by retranslating the current period's performance at the previous period's foreign currency exchange rates. Please refer to the slides titled "Non-GAAP Financial Measures and Reconciliation" for more information and a reconciliation of these measures to the most comparable GAAP measure; [3] In 2019 annual report, the results of innovative medicines developed by the Innovation Platform have been reallocated from Innovation Platform to Commercial Platform- Prescription Drugs business. H1-19 information has been revised for comparison purpose.

Cash position & 2020 Guidance

$400 million in available cash resources (excl. PIPE) [1]

Cash Position
(at end June 2020)

- **$281 million cash** / cash equiv. / Short term inv. [2]
- **$119 million** additional unutilized banking facilities [3]
- **$103 million** additional cash in JVs
- **$100 million** from PIPE with General Atlantic (Jul 2020) [4]

- **$27 million** in bank borrowings

(US$ millions)	H1 2020 Actual [5]	2020 Current Guidance	Adj. vs. Previous Guidance
Adj. (non-GAAP) Innovation Platform segment operating loss	(81.2)	(180) - (210)	nil
Adj. (non-GAAP) Group net cash flows excl. financing activities	(32.5)	(140) - (160)	nil

- **H1 2020 performance in line with published guidance:**
  - Cash dividends from our JVs; No material impact from COVID-19.
- **Cash investments to rise in H2 2020:**
  - Global C&R activities: FRESCO-2 & U.S. NDA submission (surufatinib);
  - New large-scale oncology manufacturing facility in Shanghai;
  - Expansion of oncology commercial activities (Elunate® & surufatinib).

[1] Including cash, cash equivalents, short-term investments & unutilized banking facilities; [2] Short-term investments: deposits over 3 months; [3] From Bank of America Merrill Lynch, Deutsche Bank & HSBC; [4] In early July 2020, we completed a private placement to General Atlantic, raising an additional $100 million in gross proceeds, to further strengthen our cash position; [5] Please refer to the slide titled "Non-GAAP Financial Measures and Reconciliation" for more information and a reconciliation of these measures to the most comparable GAAP measure.

Appendix

CHI-MED

A1a Realizing global potential of novel oncology assets

One of China's largest & most established discovery platforms in oncology

Global step-change innovation

- *Aiming for multiple potential first-in-class assets*

Kinase selectivity – enable combos

- *Limit off-target toxicity & address TKI resistance*

Discovery of broad range of assets against novel targets

Note: I/O = immuno-oncology; mAb = monoclonal antibody; TKI = tyrosine kinase inhibitor.

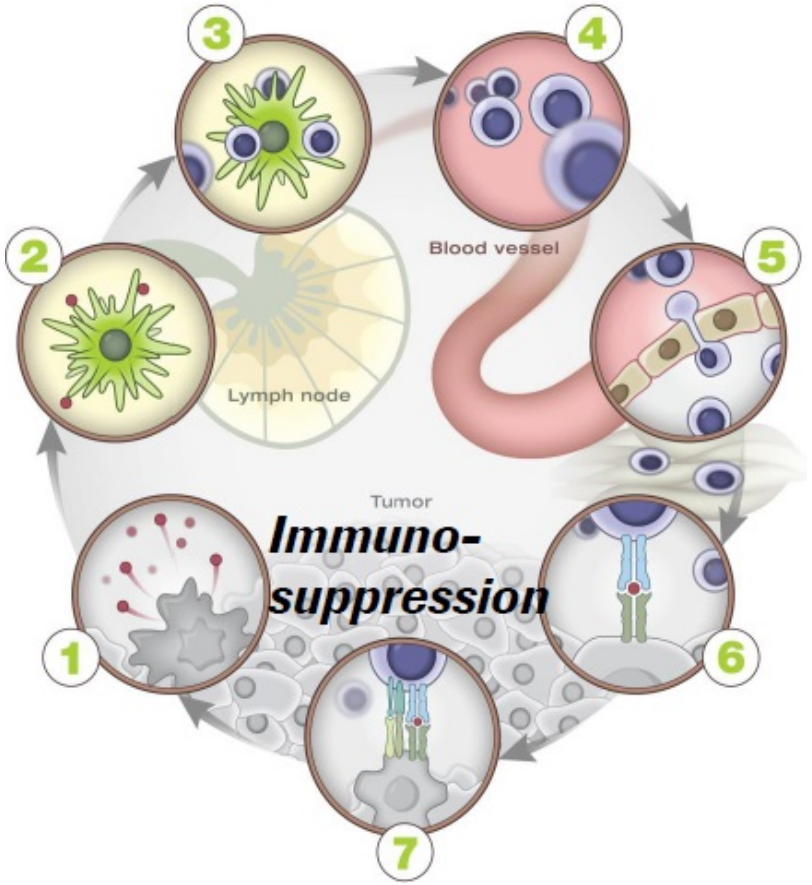
Attack cancer from multiple angles at same time

Immune Desert
Insufficient T cell response

- Chemotherapies
- Vaccines
- CAR-T (pro-inflammatory strategies)
- TCB's

Antigen Release
Aberrant genetic drivers

- Targeted therapies (small molecule & antibody)



Excluded Infiltrate
Inadequate T cell homing

- Anti-angiogenics
- Stromal targets
- Chemokines
- Vaccines

Inflamed
Inactivated T cell response

- Immunotherapies (address negative regulators)
- Vaccines

Need combinations of potent, yet tolerable drugs against specific targets

Note: Adapted from Chen DS et al. Oncology Meets Immunology: The Cancer-Immunity Cycle. Immunity, Volume 39, Issue 1, 1 - 10.

Superior safety allows for combinations

TKI + TKI combos to address acquired resistance

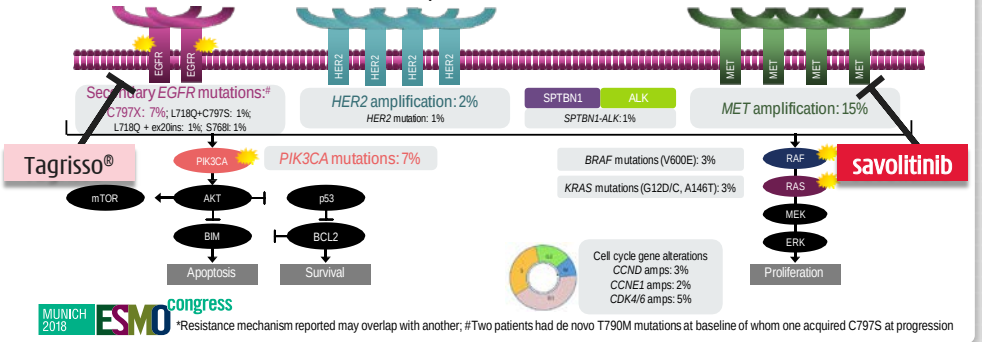
CHI-MED

TAGRISSO™ osimertinib

- **MET amplification** is the most common resistance mechanism for Tagrisso®.
- Requires addition of **MET inhibitor – savolitinib – in combo** with Tagrisso®.

RESULTS: CANDIDATE ACQUIRED RESISTANCE MECHANISMS WITH OSIMERTINIB (n=91)*

- No evidence of acquired EGFR T790M
- The most common resistance mechanisms were *MET* amplification and EGFR C797S mutation
  - Other mechanisms included *HER2* amplification, *PIK3CA* and *RAS* mutations

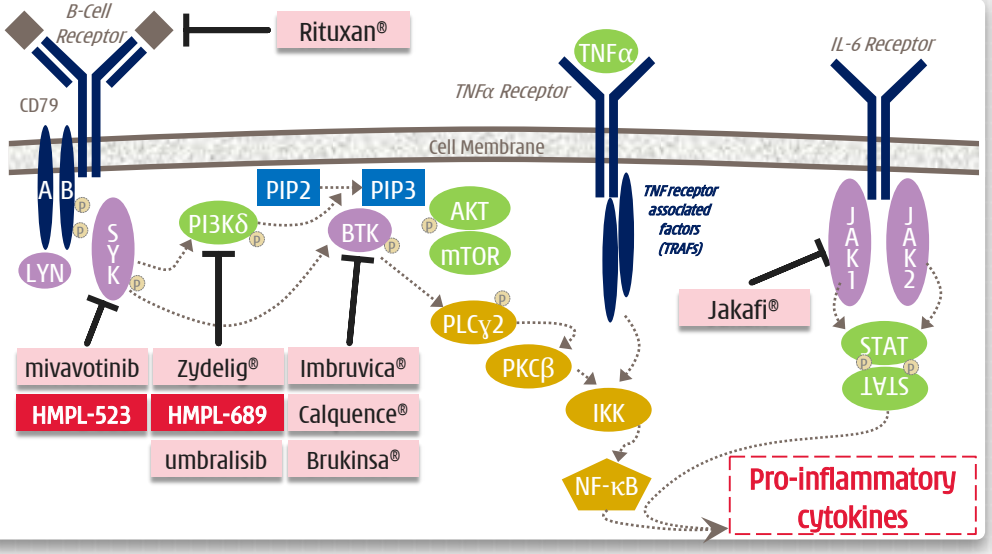


MUNICH 2018 ESMO congress

*Resistance mechanism reported may overlap with another; #Two patients had de novo T790M mutations at baseline of whom one acquired C797S at progression

imbruvica® (ibrutinib) 140mg capsules

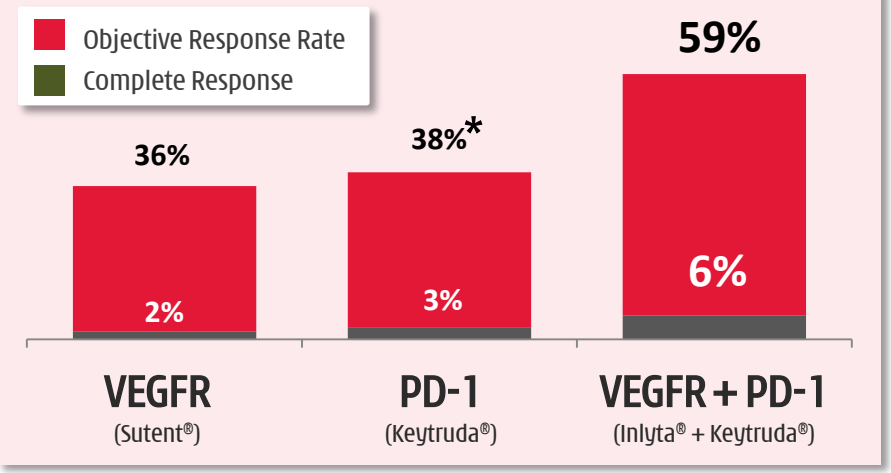
- **C481S or PLCγ** are the most common resistance mechanisms for Imbruvica®.
- Invalidating BTK inhibitor requires a **possible Syk, PI3Kδ &/or BTK TKIs**.



TKI = Tyrosine Kinase Inhibitor

Immunotherapy combinations… assets potentially ideal TKI combo partners for immunotherapy

1L Clear Cell Renal Cell Carcinoma [1]



Potent two-prong attack – BTD [2]:
Anti-angiogenesis + activated T-cell response

	Inlyta®	Fruquintinib	Surufatinib
Selectivity	Relatively selective	Highly selective	Selective angio-immuno kinase inhibitor

Global clinical drug portfolio (1/2)

Savolitinib *(c-MET)*

Potential First-in-class small molecule selective MET inhibitor

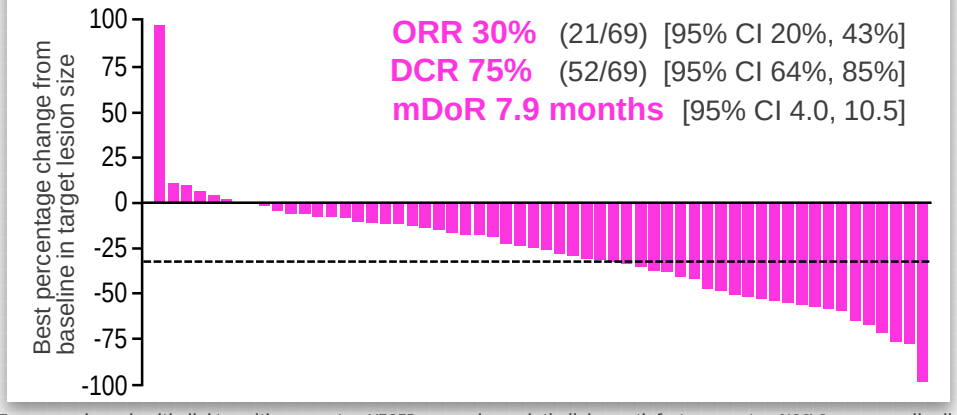
Indications:	MET-driven NSCLC; RCC; Gastric; Prostate; Colorectal cancer
Dosed to-date: [2]	~1,000 patients
Summary Data:	**NSCLC – Tagrisso® EGFR TKI refractory combinations:** **Post 1st-gen TKI** (n=105): ORR 64-67% **Post 3rd-gen TKI** (n=69): ORR 30% **NSCLC MET ex14** (n=70): ORR 49% **PRCC** (n=60): ORR 27% vs. 7%; OS HR 0.51 (not mature)

SAVANNAH global Ph. II/reg. underway[3]
Tagrisso® + savo

SINGAPORE 2019 ESMO ASIA

SINGAPORE
22-24 NOVEMBER 2019

Osimertinib plus savolitinib for patients with disease progression on prior third-generation EGFR-TKI: Preliminary anti-tumor activity



Fruquintinib *(VEGFR1/2/3)*

Potential Best-in-class small molecule selective VEGFR 1/2/3 inhibitor

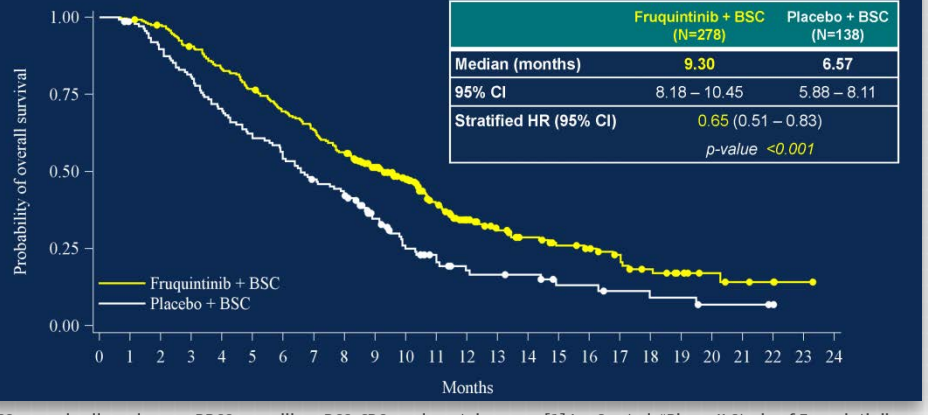
Indications:	Colorectal; NSCLC; Gastric cancer
Dosed to-date: [2]	~1,700 patients
Summary Data:	**3L CRC** (n=416): mOS 9.3mo. vs. 6.6mo. (SoC) **3L NSCLC** (n=91): ORR 13%; mPFS 3.8mo. vs 1.1mo. (SoC) **1L NSCLC (Iressa® combo)** (n=50): ORR 72% [1] **2L Gastric (Taxol® combo)** (n=28): ORR 36%

Launched in CRC Nov 2018 in China

PRESENTED AT: ASCO ANNUAL MEETING '17

Overall Survival (Primary Endpoint)

FRESCO clearly succeeded in meeting the primary efficacy endpoint of OS



MET = mesenchymal epithelial transition receptor, VEGFR = vascular endothelial growth factor receptor, NSCLC = non-small cell lung cancer, RCC = renal cell carcinoma, PRCC = papillary RCC, CRC = colorectal cancer; [1] Lu, S., et al, "Phase II Study of Fruquintinib plus Gefitinib in Stage IIIb/IV NSCLC Patients Harboring EGFR Activating Mutations", #4780 ESMO Asia, Singapore, Nov 23, 2019; [2] Patients in all clinical trials (treatment arm); [3] Phase II registration intent study subject to regulatory discussions.

Global clinical drug portfolio (2/2)

Surufatinib *(VEGFR, FGFR1, CSF-1R)*

Unique small molecule VEGFR 1/2/3, FGFR1 & CSF-1R inhibitor

Indications:	Neuroendocrine tumors (pNET/ep-NET); Biliary Tract
Dosed to-date: [1]	›800 patients
Summary Data:	**Ep-NET** (n=198): ORR 10%; mPFS 9.2mo vs 3.8mo (Pbo) **PhII interim pNET** (n=41): ORR 17%; mPFS 19.4mo.

Ep-NET China NDA: Filing Accepted
Preparing US NDA

HMPL-523 *(Syk)*

Potential First-in-class small molecule selective Syk inhibitor

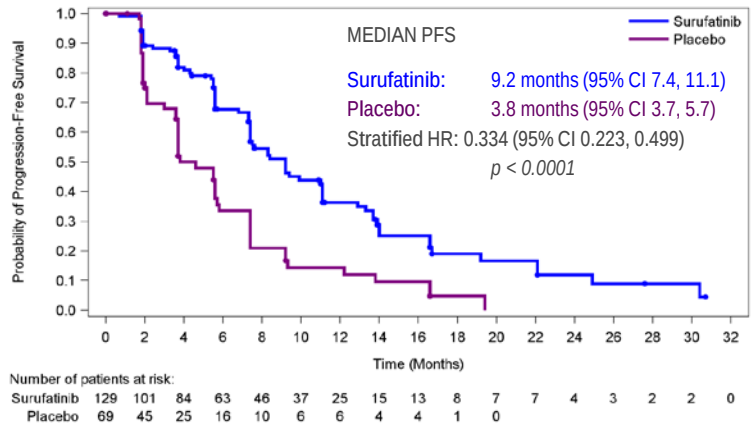
Indications:	Indolent non-Hodgkin's lymphoma; Immunol.
Dosed to-date:	›200 pts. & ~118 healthy vol.
Summary Data:	Dose escalation (5 cohorts) [2] **FL** (n=10): ORR 30% **CLL/SLL** (n=3): ORR 33%

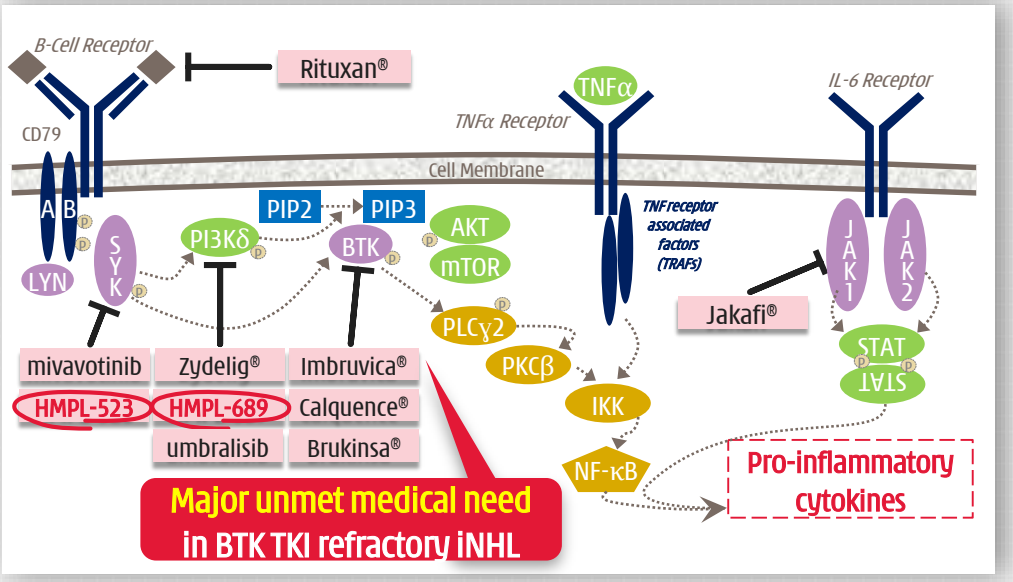
HMPL-689 *(PI3Kδ)*

Potential Best-in-class small molecule selective PI3Kδ inhibitor

Indications:	Indolent non-Hodgkin's lymphoma
Dosed to-date:	70 pts. & ~36 healthy vols.
Summary Data:	Phase I dose escalation data not yet published

BARCELONA 2019 ESMO congress — 27 SEPT – 1 OCT 2019





[1] Dosed to-date = patients in all clinical trials (treatment arm); [2] Blood, vol. 132 no. US/EU Phase I/Ib study enrollment underway

[1] in U.S., in E.U. Tabernero - Vall d'Hebron & Sobrero - Genova; * Investigator initiated trials (IITs).

Note: MET = mesenchymal epithelial transition receptor, VEGFR = vascular endothelial growth factor receptor, EGFRm = epidermal growth factor receptor mutation, FGFR1 = fibroblast growth factor receptor 1, CSF-1R = colony stimulating factor-1 receptor, Syk = spleen tyrosine kinase, PI3Kδ = Phosphatidylinositol-3-Kinase delta, NSCLC = non-small cell lung cancer, RCC = renal cell carcinoma, NET = neuroendocrine tumors; NHL = Non-Hodgkin's Lymphoma; ASCO GU = American Society of Clinical Oncology Genitourinary Cancer Symposium; PoC = Proof of Concept.

CHI-MED

A1b Building a fully integrated China oncology business

China oncology - ›25% of world's cancer patients[1]

Industry's attention turning to unmet medical need in China oncology

- *Regulatory reforms in China - addressing low SoC [2]*
- *Major investment inflow*

Chi-Med is a first mover

- *Elunate® launch in 3L mCRC; First ever in China [3]*
- *Deep pipeline - 9 clinical drug candidates with 3 NDAs submitted in China*

Major commercial opportunity

- *National Drug Reimbursement; Medical coverage*

[1] Global Cancer Observatory, WHO, ACS, NCCR, Frost & Sullivan analysis;
[2] SoC = Standard of Care; [3] Believed to be the first ever China-discovered novel oncology drug to receive full NDA approval in China.

China now world's 2nd largest pharma market

...investment, approvals & access all accelerating rapidly

Per Capita Healthcare Spending

Established Chi-Med Commercial Platform in China

Focus on building out oncology commercial organization

Focus on building out Oncology commercial

Establishing oncology commercial team of ›320 FTEs by June 2020.

Plan to launch surufatinib in China in late 2020.

Plan to expand to 900+ FTEs[7] by 2023 & take on multiple assets.

Major Commercial & Production Scale

~2,300 RX & ~900 OTC sales people in about 320 [1] cities & towns in China.

Drugs in ›22,100 hospitals detailing ›74,000 doctors.

Sold ~4.7 billion doses of medicine in 2019.

Leadership Market Shares

Market leader in the sub-categories/markets in which we compete [2]:

SXBX pill:[3][4] Rx Cardiovascular TCM	~18%
Banlangen:[5] OTC Anti-viral /flu TCM	~54%
FFDS tablet:[6] OTC Angina TCM	~38%

JVs with 3 Major China Pharmas

SPH 上海医药 SHANGHAI PHARMA

GPC

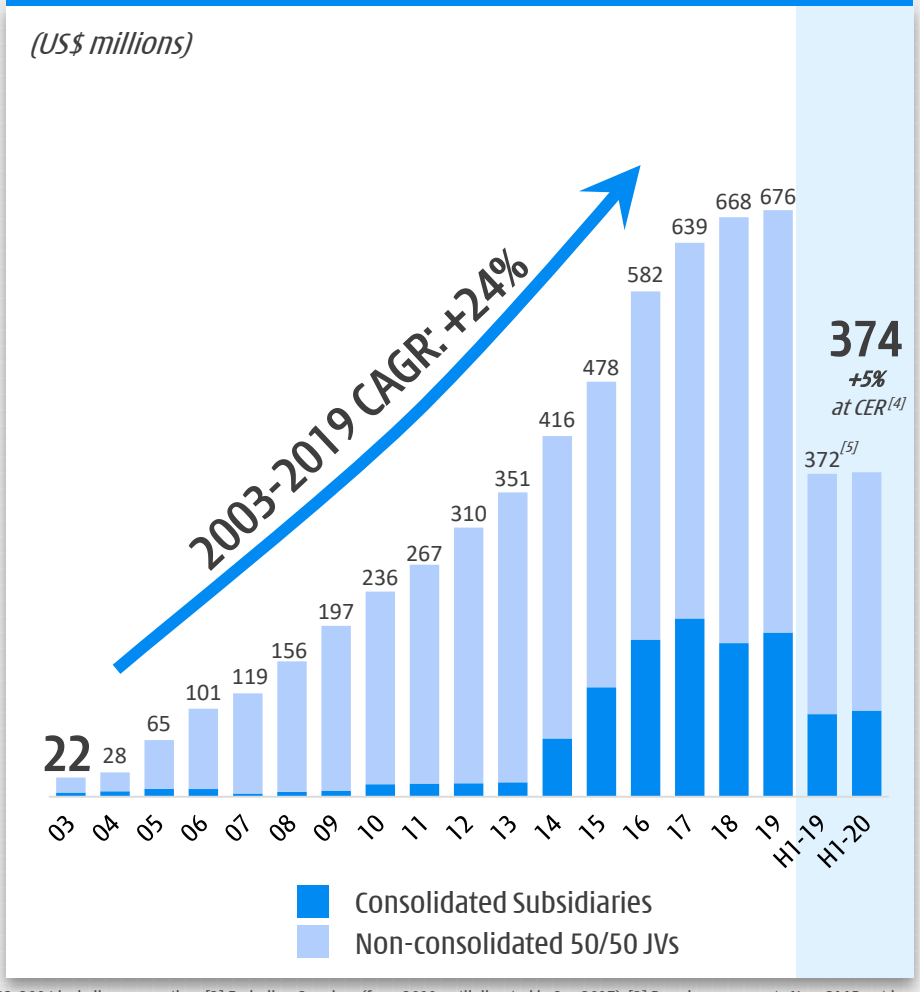
SINOPHARM

[1] 320 cities & towns covered by Prescription Drug Business and 600 cities & towns including OTC business; [2] Frost & Sullivan 2018 market share data; [3] China coronary heart disease oral Chinese patented drugs market share; [4] She Xiang Bao Xin Pill ("SXBX pill") - Rx Coronary artery disease; [5] Banlangen Granules ("Banlangen") - OTC Antiviral; [6] Fu Fang Dan Shen tablets ("FFDS") - OTC Angina; [7] FTE = full-time employees.

Building a China Specialty Pharma business

Proven track record – major focus on oncology 2020 onwards

Revenue (Non-GAAP) [1][2]



Net Income/(Loss) attrib. to Chi-Med

(US$ millions)

	Total NI [3]	NI to Chi-Med	2007-2019 CAGR
Prescription Drugs	422	217	+36%
Consumer Health	238	95	+9%
Existing China Business	**660**	**312**	**+22%**

A2

Product Candidate Details

Further details on each drug candidate

CHI-MED

A2a

Savolitinib

Potential first-in-class selective MET inhibitor

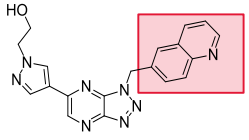
Savolitinib

Potential first-in-class selective MET inhibitor

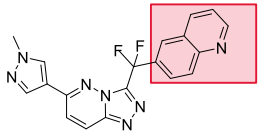
1. Strong potential to become first selective MET inhibitor approved in certain indications.

- ✓ Clear clinical efficacy observed in **non-small cell lung ("NSCLC"), kidney, gastric and colorectal** cancers.
- ✓ Partnered with AstraZeneca – **key comp. advantages in NSCLC (Tagrisso® combo) & biomarker testing**.

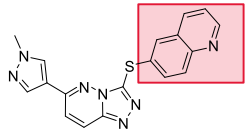
3. Savolitinib design eliminates renal toxicity first generation of selective MET inhibitors encountered – ~1,000 patients involved in clinical studies to date.



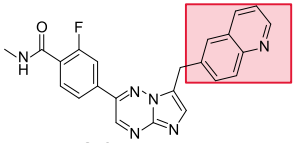
Pfizer PF-04217903



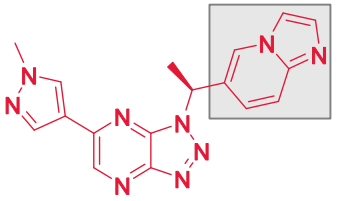
Janssen JNJ-38877605



Lilly SGX-523



Novartis/Incyte INC-280



savolitinib

2-quinolinone metabolite in humans in 1st-gen MET compounds has dramatically reduced solubility and appeared to crystallize in the kidney resulting in obstructive toxicity.

2. MET is aberrant in many tumor settings. [7]

	MET			New Cases (2018)	
Indication	Amplification	Mutation	Over-Expression	Global	China
Gastric	10%	1%	41%	1,033,700	442,300
Non-small Cell Lung Cancer	4%/16%/30% [1]	2% [2]	39%	1,779,800	737,400
Head & Neck	17-39%	11% [3]	46% [4]	887,700	137,000
Colorectal	10%	3%	65%	1,801,000	426,700
Papillary Renal Cell Carcinoma	64%	70-100% [5]	55%	45,400	3,700
Clear Cell Renal Cell Carcinoma	54%	NA	35%	281,300	57,500
Esophagus	8%	NA	92%	572,000	271,600
Prostate	NA	NA	54/83% [6]	1,276,100	99,300

4. AstraZeneca collaboration & 2016 amendment.

- $20m received upfront (Dec 2011);
- $120m in development/approvals milestones ($25m received as of December 2019);
- Several hundred million in commercial milestones;
- Development costs: AZ pay 100% ex-China (excl. $50m by Chi-Med) & 75% development cost in China (Chi-Med 25%);
- **From 9% up to 18% tiered royalty ex-China [8]** & 30% flat rate China royalty on all product revenues.

[1] MET amplification in non-small cell lung cancer patients occurs in approximately 4% of patients not previously exposed to systemic therapies and in approximately 16% to 30% of patients with acquired resistance to EGFR inhibitors; [2] MET Exon 14 skipping mutation only; [3] Oropharynx squamous cell cancer only; [4] Head and neck squamous cell cancer only; [5] Type 1 papillary renal cell carcinoma only; [6] MET expression is increased with progression of prostate cancer, which is 54% of lymph node metastases and 83% of bone metastases; [7] Company estimates considering Frost & Sullivan data, National Central Cancer Registry of China and publicly available epidemiology data; [8] Base royalty of 9%-13%. Additional 5% royalty subject to approval in the papillary renal cell carcinoma (PRCC) indication, for a total of 14%-18% tiered royalty. After total aggregate sales of savolitinib have reached $5bn, the royalty will step down over a two-year period, to an ongoing royalty rate of 10.5% to 14.5%.

Savolitinib – MET Exon 14 skipping NSCLC

China's lead selective MET inhibitor

Competitive landscape outside China:

[1] BICR = blinded independent central review; [2] closed early due to slow enrollment; [3] patients followed for over 9 months.

TATTON B & D data - PFS

Tagrisso® + savolitinib in EGFR TKI refractory NSCLC

	Median PFS, months [95% CI]	Median (range) duration of follow-up in censored patients, months
Part B1 Prior third-generation EGFR-TKI; (600 mg [1]; n=69)	**5.4** [4.1, 8.0]	**2.6** [0.0-27.3]
Part B2 No prior third-generation EGFR-TKI, T790M negative; (600 mg [1]; n=51)	**9.0** [5.5, 11.9]	**10.1** [0.0-27.5]
Part B3 No prior third-generation EGFR-TKI, T790M positive; (600 mg [1]; n=18)	**11.0** [4.0, NR]	**14.7** [1.2-29.3]

Progression data had a maturity of 62%.

Patients who had not progressed or died at the time of analysis were censored at the time of the latest date of assessment from their last evaluable RECIST assessment. Circles indicate censored observations.

	Median PFS, months [95% CI]	Median (range) duration of follow-up in censored patients, months
Part D No prior third-generation EGFR-TKI, T790M negative; (300 mg; n=42)	**9.1** [5.4, 12.9]	**3.0** [0.0-11.0]

Progression data had a maturity of 40%.

Patients who had not progressed or died at the time of analysis were censored at the time of the latest date of assessment from their last evaluable RECIST assessment. Circles indicate censored observations.

PFS= Progression Free Survival; EGFR = Epidermal Growth Factor Receptor; TKI = Tyrosine Kinase Inhibitor; [1] Most patients were enrolled to Part B1, B2, B3 on 600 mg savolitinib, prior to weight-based dosing implementation, but following a protocol amendment in response to a safety signal of hypersensitivity, the final 21 patients enrolled in Part B were dosed with savolitinib by body weight as follows: patients who weighed ≤55 kg (n=8) received 300 mg daily and those weighing >55 kg (n=13) received 600 mg daily.

TAGRISSO™ osimertinib + savo in EGFR TKI refractory NSCLC

TATTON B & D data – AEs & tolerability

Event, n (%)	All Part B (n=138) osimertinib 80 mg + savolitinib 600 mg [1]	Part D (n=42) osimertinib 80 mg + savolitinib 300 mg [1]
Any AE	135 (98)	39 (93)
Any AE possibly related to savolitinib	115 (83)	25 (60)
AE grade ≥3	79 (57)	16 (38)
AE possibly causally related to study treatment leading to discontinuation of:		
Savolitinib	38 (28)	9 (21)
Osimertinib	14 (10)	2 (5)
Any AE leading to death	6 (4)	2 (5)
Any SAE	62 (45)	11 (26)

[1] Most patients were enrolled to Part B1, B2, B3 on 600 mg savolitinib, prior to weight-based dosing implementation, but following a protocol amendment in response to a safety signal of hypersensitivity, the final 21 patients enrolled in Part B were dosed with savolitinib by body weight as follows: patients who weighed ≤55 kg (n=8) received 300 mg daily and those weighing >55 kg (n=13) received 600 mg daily. Part D data are preliminary, therefore, for osimertinib, the mean actual treatment exposure was 8.5 months vs 6.1 months for Parts B and D, respectively, and 7.1 months vs 4.9 months for savolitinib, for Parts B and D, respectively; Sequist LV, Han JY, Ahn MJ, et al. Osimertinib plus savolitinib in patients with EGFR mutation-positive, MET-amplified, non-small-cell lung cancer after progression on EGFR tyrosine kinase inhibitors: interim results from a multicentre, open-label, phase 1b study. Lancet Oncol. 2020; S1470-2045(19)30785-5. doi:10.1016/S1470-2045(19)30785-5

TATTON B & D data - AEs & SAEs

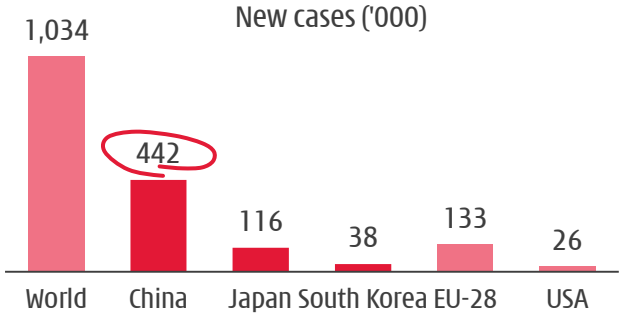
Savolitinib – MET+ gastric cancer

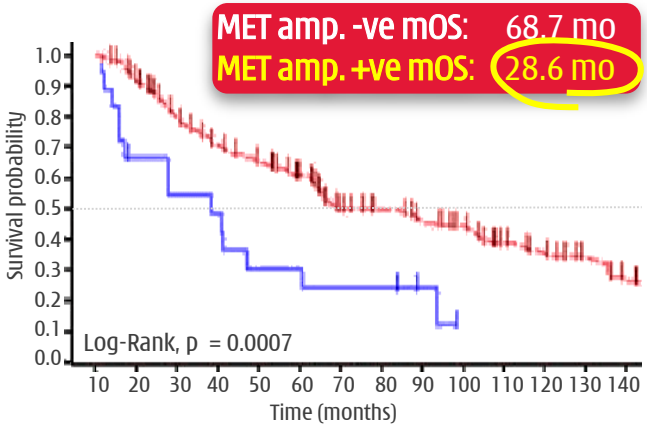
A major problem in east Asia – Japan, South Korea & China

1. Gastric (stomach) cancer is the 5th most common cancer globally – 782,700 deaths/year

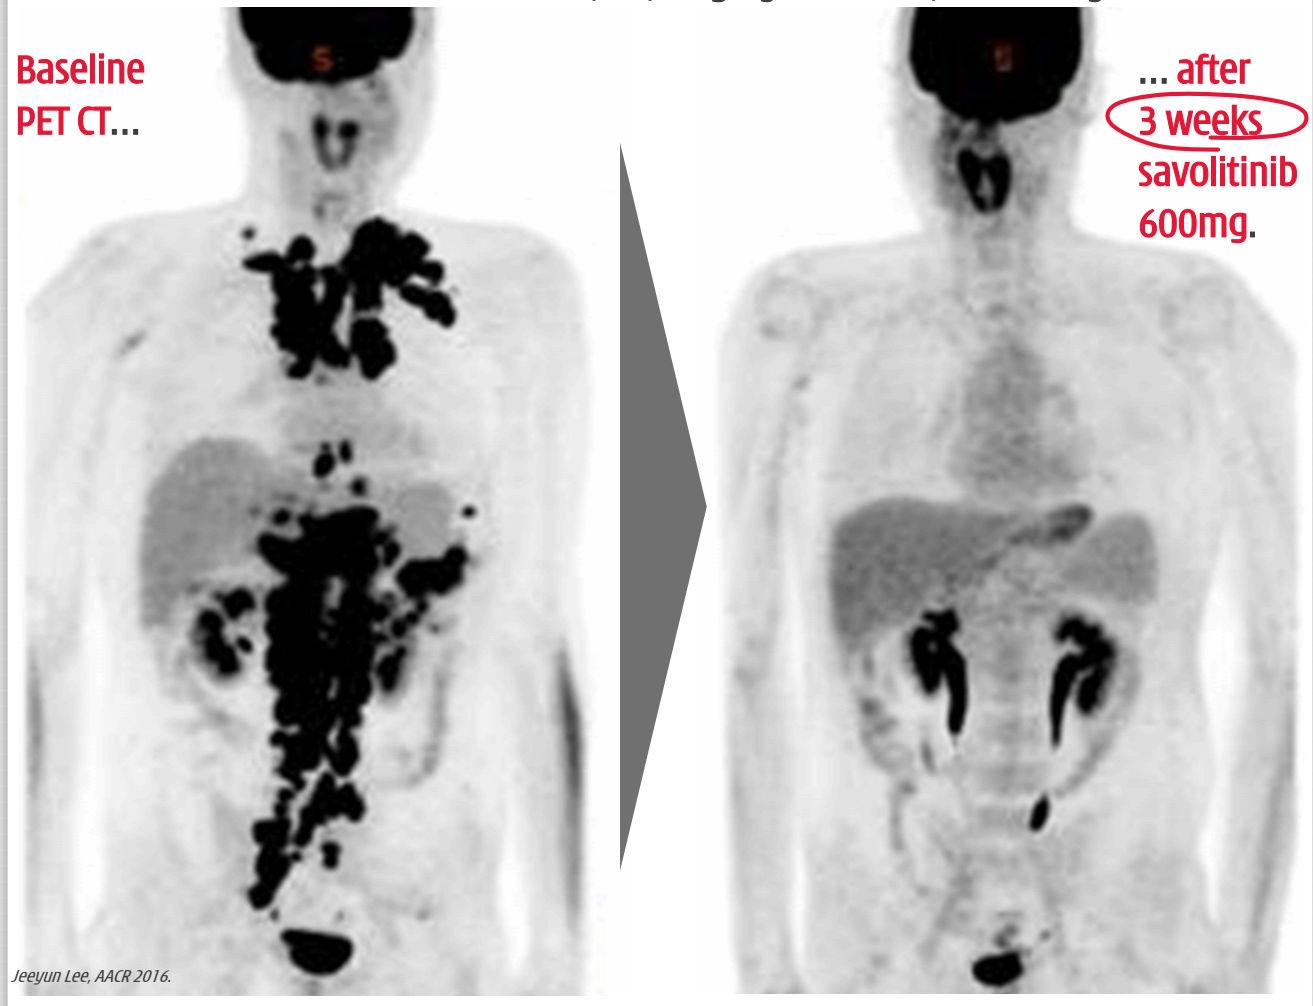


World Cancer Research Fund International, WHO, ACS, NCCR, Lancet, Frost & Sullivan Analysis.

2. MET+ disease is more aggressive [1]



3. VIKTORY trial savolitinib arm – male, 34; surgery ruled-out; failed 4-cycles XELOX.



Jeeyun Lee, AACR 2016.

[1] Catenacci, et al. "MET tyrosine kinase receptor expression and amplification as prognostic biomarkers of survival in gastroesophageal adenocarcinoma." Cancer. 2017 Mar 15; 123(6): 1061-1070. doi: 10.1002/cncr.30437.
[2] Lee, et al. "Tumor genomic profiling guides metastatic gastric cancer patients to targeted treatment: The VIKTORY Umbrella Trial." Cancer Discov. 2019 Jul 17. pii: CD-19-0442. doi: 10.1158/2159-8290.CD-19-0442. ‹5 patients in all other arms.

Savolitinib potential in gastric cancer

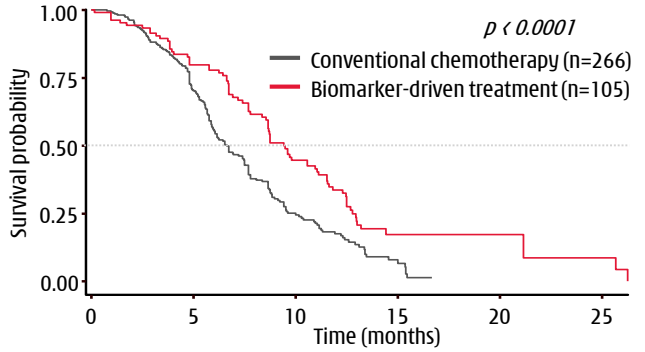
VIKTORY Phase II trial highly promising in MET+ gastric cancer

VIKTORY: Highest response rate in savolitinib monotherapy arm

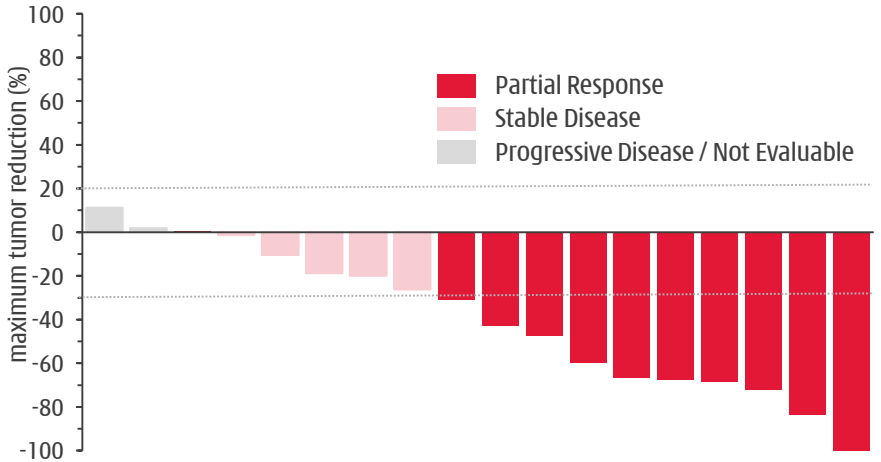
Tumor sequenced (N=715) → Eligible for 2nd line treatment (N=460)
→ Biomarker positive; received targeted treatment (N=105)

RAS/MEK	TP53	PIK3CA	MET amp	Others
(N=25)	(N=25)	(N=24)	(N=20)	
Selumetinib + Docetaxel	Adavosertib + Paclitaxel	Capivasertib + Paclitaxel	Savolitinib monotherapy	Each arm contained <5 patients
ORR = 28%	ORR = 24%	ORR = 33%	**ORR = 50%**	

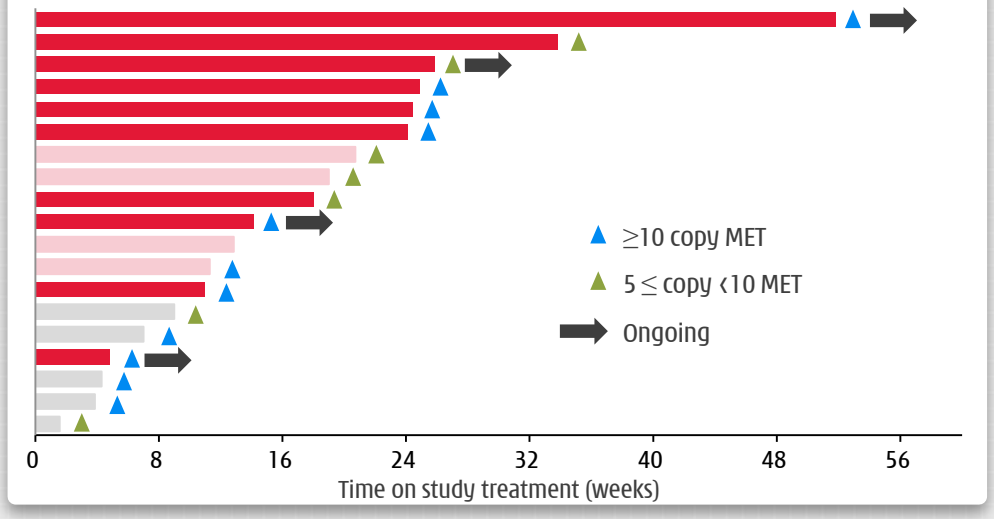
Biomarker guided treatment may prolong overall survival



VIKTORY: Best tumor response (savolitinib arm)



Duration of response (savolitinib arm)



Lee, et al. "Tumor genomic profiling guides metastatic gastric cancer patients to targeted treatment: The VIKTORY Umbrella Trial." Cancer Discov. 2019 Jul 17. pii: CD-19-0442. doi: 10.1158/2159-8290.CD-19-0442. <5 patients in all other arms.

Surufatinib

Highly active TKI with unique angio-immuno activity

Surufatinib

Overview of NET – ~170,000 patients in the U.S. [1][2][3]

What are neuroendocrine tumors ("NET")?

- ~2% of all malignancies.
- Tumor begins in the specialized cells of the body's neuroendocrine system. Cells have traits of both hormone-producing endocrine cells & nerve cells.
- Found throughout the body's organs. Most NETs take years to develop but some can grow fast.

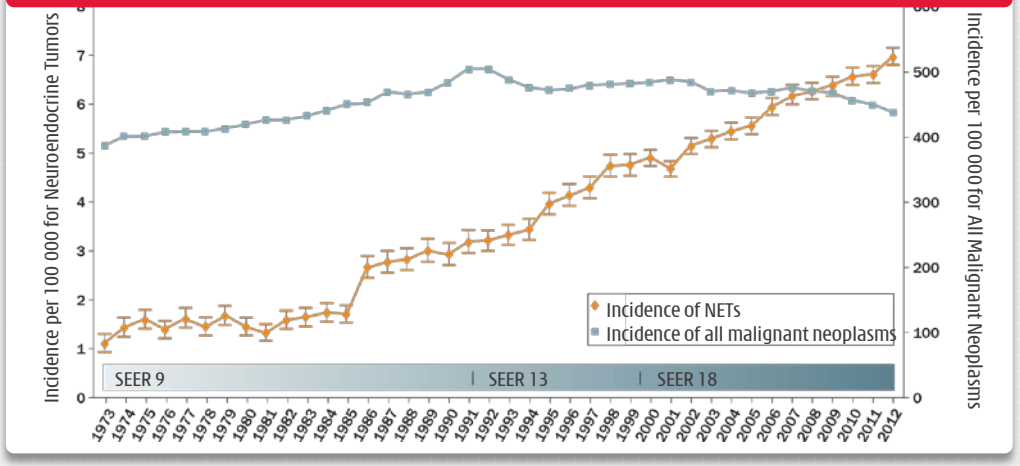
Hormone-related symptoms [1]

- Functional NETs (~8-35% of patients) release hormones / peptides causing symptoms like diarrhea & flushing; Non-functional NETs have no symptoms.

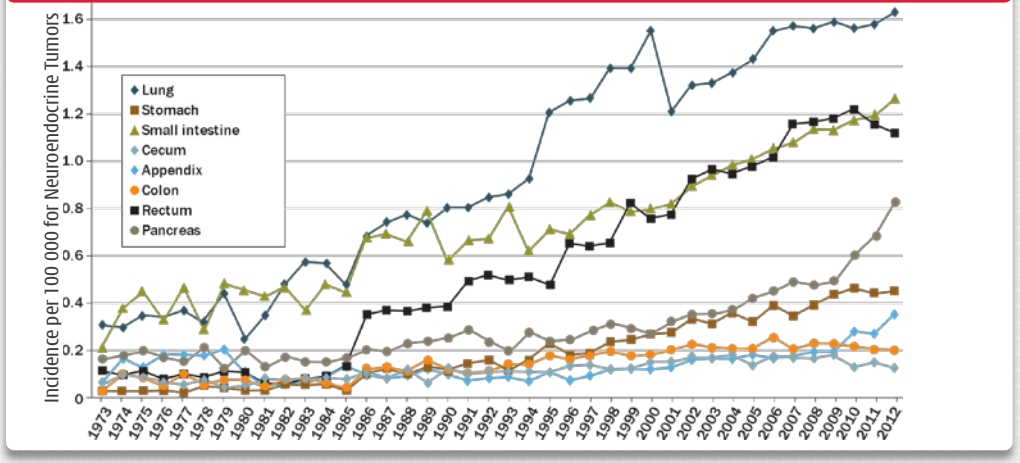
Differentiation & biomarkers for grading:

- Well differentiated: look like healthy cells – grow slowly; Poorly differentiated: look less like healthy cells – grow quickly;
- Mitotic count – Mitosis is process by which tumor cells grow & divide; Ki-67 index – Ki-67 a protein that increases as cells divide.

NET growth – better diagnosis



NET epidemiology – highly fragmented



[1] *Dasari A, et al.: Trends in the Incidence, Prevalence, & Survival Outcomes in Patients With Neuroendocrine Tumors in the U.S.*. JAMA Oncol. *2017;3(10):1335-1342;*
[2] www.cancer.net (patient information from ASCO) – NET is a subtype of neuroendcrine neoplasms, NENs); [3] IQVIA 2019.

~170,000 NET patients in U.S. [1][2]

U.S. NET treatment landscape – highly fragmented

	Somatostatin Based Therapies			Kinase Inhibitor Therapies

SANET-ep

Enrolled more pts with poor prognosis.

Primary Site	mOS	Survival Rate @ 5-yr
Rectum	2.8y	28%
Stomach	2.4y	32%
Small Intestine	8.6y	69%

RADIANT-4

Did not enroll other extra-pancreatic NET organ sites incl. but not limited to

Throat	Thyroid
Kidney	Ovary
Mediastinum	Adrenal gland
Retroperitoneal	Ampulla vater
Parathyroid gland	Carotid body
Liver	

SANET-ep

Broader pt. coverage.

SANET-ep

Later-stage patients, more heavily pre-treated (incl. with targeted therapy) & weaker physical status.

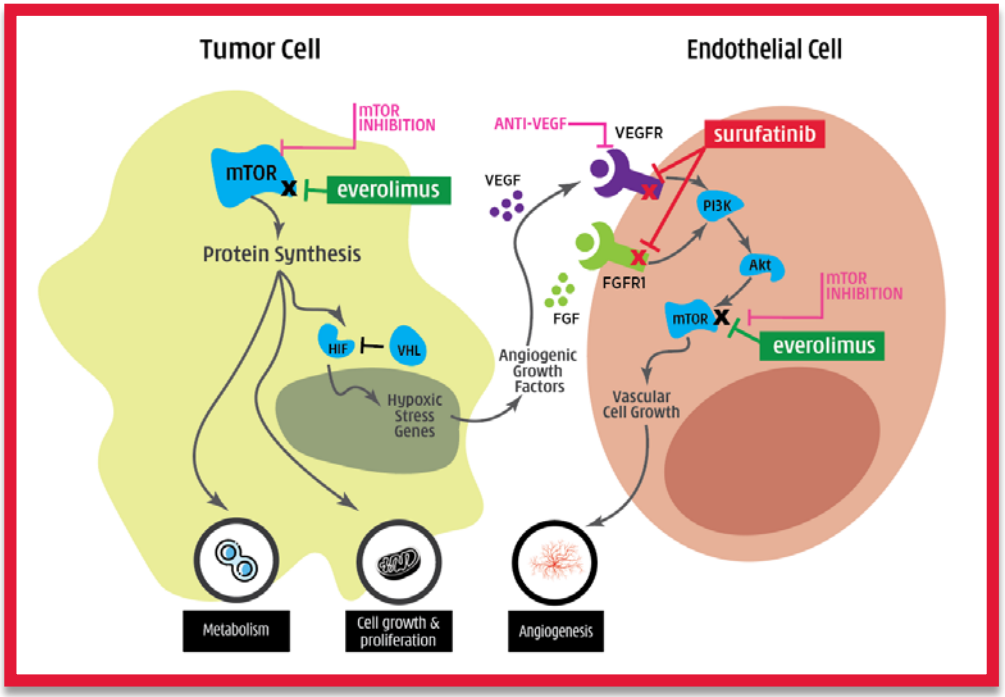
Likely due to later diagnosis in China & availability of everolimus.

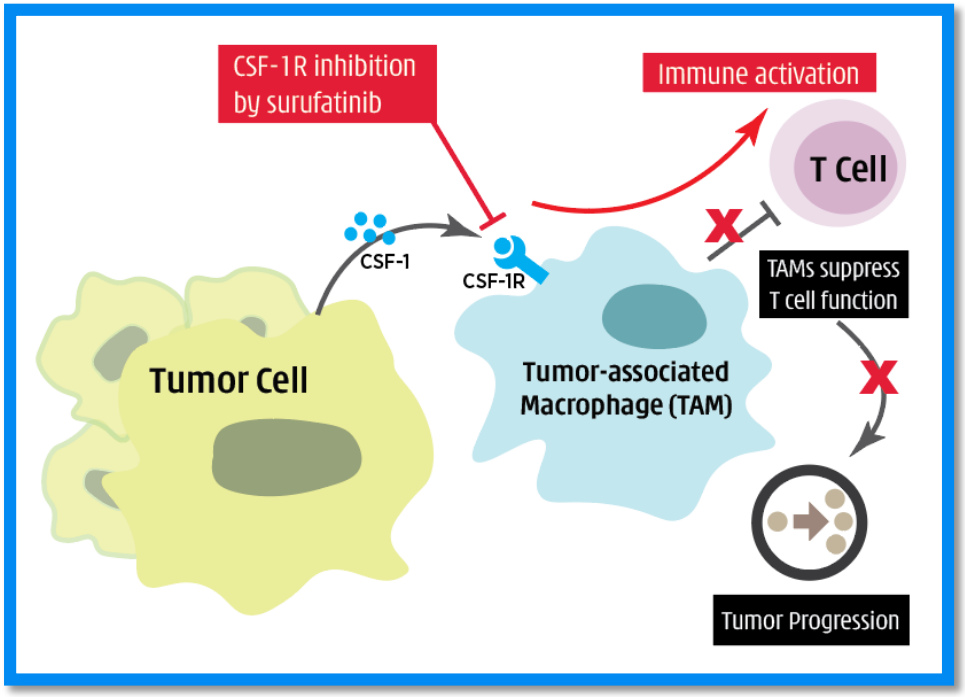
Source: Xu et al, ESMO 2019 #LBA76; Yao et al, Lancet 2016 387(10022) 968-77; Yao et al, JAMA Oncol 2017 3(10) 1335-42; Excludes 7% pancreatic NET in US series and 6% in Asia series; Colon-rectum in Tsai et al. (2013) report; Colon approximately 8% in Asian series (Shebani KO et al. (1999)); Colon-rectum in Yao et al. (2008) report; Colon approximately 4-7% in US/EU series (Niederle B et al. (2016)).

Very different mechanism of action

Everolimus inhibits **mTOR** and blocks the effects caused by the loss of certain genes thereby reducing cell growth, proliferation, and angiogenesis.

Surufatinib inhibits **VEGFR1/2/3** and **FGFR1** blocking vascular cell growth and angiogenesis; as well as **CSF-1R** which limits the production of TAMs which cloak the cancer cell from T-Cell attack.





Surufatinib – China NET

Two positive Ph. III studies unblinded a year ahead of schedule

Epidemiology – *China NET & BTC patient populations*

First targeted therapy ever to address all NET patients, regardless of primary organ site

Registration-intent study in BTC underway

		Annual Incidence	Estimated Prevalence	mPFS	NRDL Pricing References
China NET	100%	67,600	~300,000 (Est. China ratio[1])		Sutent® (~US$ 2,007/mo.[2]) Afinitor® (~US$ 1,320/mo.[2])
Non-Pancreatic NET	~80%	~54,100	~240,000 (Est. China ratio[1])	9.2 mo. (SANET-ep Ph.III)	
Pancreatic NET	~20%	~13,600	~60,000 (Est. China ratio[1])	19.4 mo. (Ph.II) (SANET-p Ph.III -- TBD)	
Biliary Tract Cancer	100%	64,000		TBD	

NET is major unmet medical need in China – with long treatment duration

[1] Source: Frost & Sullivan. Current estimated Prevalence to Incidence ratio in China at 4.4, lower than U.S. 7.4 ratio due to lower access to treatment options;
[2] NRDL pricing references calculations assume exchange rate of RMB6.74 per US$1.

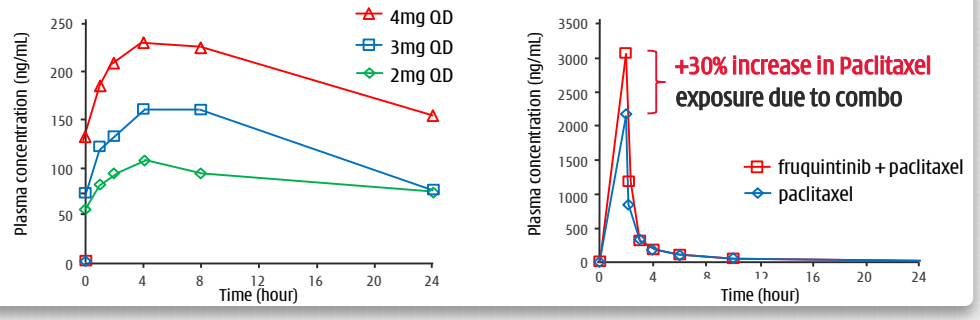
FRUTIGA – Gastric combo with paclitaxel

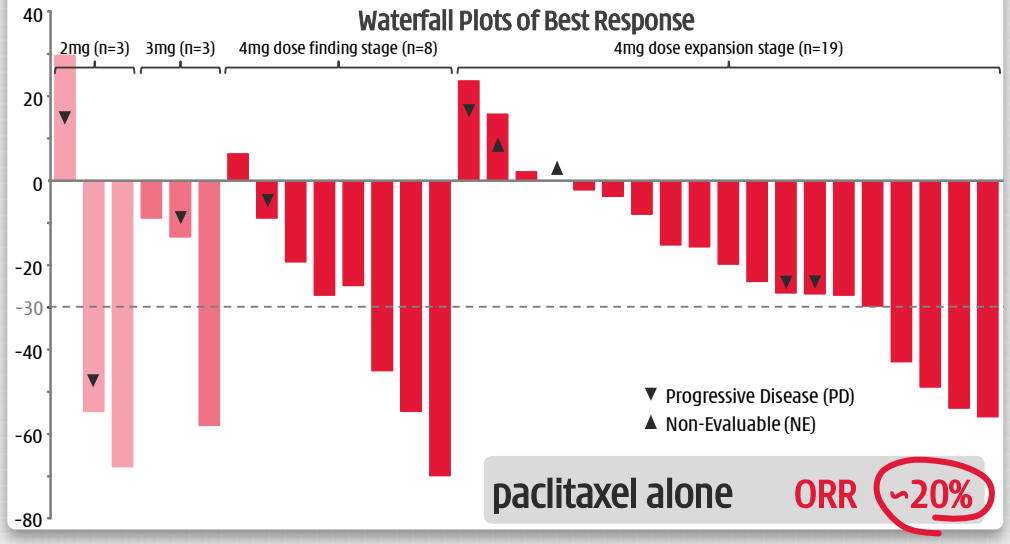
Phase III initiated Oct 2017 – 2nd interim analysis June 2020

CHI-MED

1. **Dose proportional increase of fruquintinib** AUC at steady state. Over **30% increase in paclitaxel drug exposure** (mean AUC_{0-8}) following multiple dose fruquintinib.



2. **ORR of 36%** (10/28) & **DCR of 68%** in efficacy evaluable pts. Fruquintinib 4mg, **≥16 wk. PFS of 50%** & **≥7 mo. OS of 50%.**



3. Encouragingly low level of dose reduction/interruption. Actual mean administered dose in the first cycle was **3.32mg/day for fruquintinib** (83.0% planned dose) & **78.6 mg/m2/week for paclitaxel** (98.3% planned dose).

Characteristics (Unit)	Drug Expansion Stage (N=19) Fruquintinib 4 mg + paclitaxel 80 mg/m²	
	Drug interruption	Drug reduction
Dose modification with Fruquintinib N (%)	2 (10.5%)	2 (10.5%)
Dose modification with Paclitaxel N (%)	5 (26.3%)	1 (5.3%)

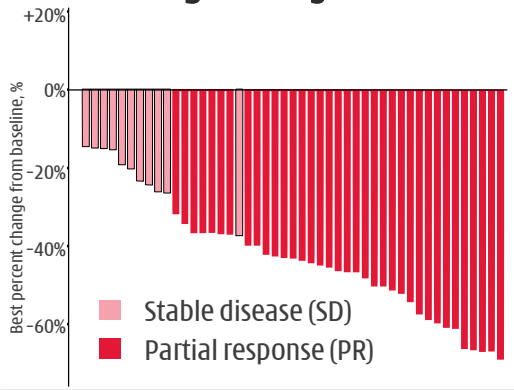
4. **AE profile in-line with expectations**. Neutropenia – a paclitaxel driven AE – with 57.9% Grade ›3 AEs. **Similar to 60% level seen in RAINBOW study of ramcirumab (VEGF mAb)** combo with paclitaxel in 2L gastric cancer.

Drug related grade 3 or 4 AEs (NCI-CTCAE v 4.0) term	Dose Expansion Stage (N=19) Fruquintinib 4 mg + paclitaxel 80 mg/m²
Neutropenia	11 (57.9%)
Leukopenia	4 (21.0%)
Hypertension	2 (10.6%)
PLT decreased	1 (5.3%)
Anemia	1 (5.3%)
HFSR	1 (5.3%)
Mucositis oral	1 (5.3%)
Hepatic disorder	1 (5.3%)
Upper gastrointestinal hemorrhage	1 (5.3%)

Fruquintinib – 1L NSCLC combo w/ IRESSA® gefitinib

Two small molecule TKIs allow for better management of tox.

1. Promising efficacy in first line – 72% ORR (36/50). [1,2,3]



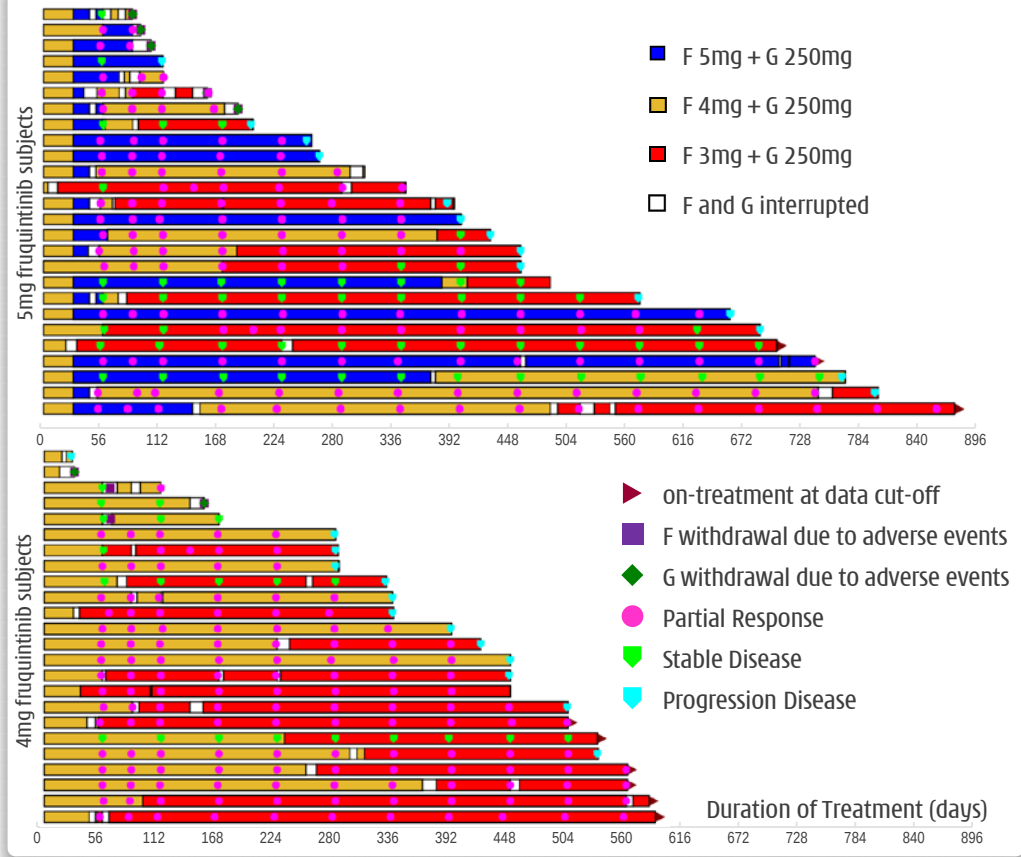
PR, n (%)	36 (72.0%)
SD, n (%)	12 (24.0%)
PD, n (%)	1 (2.0%)
NA, n (%)	1 (2.0%)
DCR, n (%)	48 (96.0%)
mDoR (mths)	12.9 (10.7, 16.6)
mPFS (mths)	14.7 (12.5, 21.2)

Data as of June 28, 2019.

2. Prelim. safety data: fruquintinib vs. other VEGFRis.

Adverse Events ("AEs")	Iressa® or Tarceva® FLAURA [5] N = 277, n (%)	Avastin® + Tarceva® [6] N = 75, n (%)	5mg Fruq. + Iressa® N = 26, n (%) [3]	4mg Fruq. + Iressa® N = 24, n (%) [3]
All AEs, any grade	**273 (98%)**	**≥74 (≥99%)**	**26 (100%)**	**24 (100%)**
All AEs, Grade ≥3	**124 (45%)**	**68 (91%)**	**17 (65%)**	**11 (46%)**
AEs leading to death	**6 (2%)**	**0 (0%)**	**3 (12%)**	**0 (0%)**
AEs to VEGFRi disc.	NA	31 (41%)	6 (23%)	4 (16%)
Grade ≥3 AEs:				
Liver function	33 (12%)	6 (8%)	13 (50%)	3 (13%)
Hypertension	NA	45 (60%)	1 (4%)	1 (4%)
Proteinuria	NA	6 (8%)	3 (12%)	1 (4%)
Rash	13 (5%)	19 (25%)	0 (0%)	1 (4%)
Decreased appetite	22 (8%)	1 (1%)	NA	NA

3. Combination of highly selective TKIs vs. mAbs: daily dose flexibility improves tolerability. This enables maintained drug exposure, leading to more durable response. [2,3]



[1] Best tumor response for efficacy evaluable patients (patients who had both baseline and post-baseline tumor assessments); ORR = objective response rate; [2] Four PRs not yet confirmed at the time of data cut-off date; mAb = Monoclonal Antibody; [3] Lu, S., et al, "Phase II Study of Fruquintinib plus Gefitinib in Stage IIIb/IV NSCLC Patients Harboring EGFR Activating Mutations", #4780 ESMO Asia, Singapore, November 23, 2019; [4] Drug discontinuation due to Grade 3 proteinuria and Grade 3 QTc prolonged; [5] Ramalingam S. et al, "LBA2_PR Osimertinib vs standard of care (SoC) EGFR-TKI as first-line therapy in patients (pts) with EGFRm advanced NSCLC: FLAURA", ESMO 2017 Congress, Madrid, Spain, September 9, 2017; [6] Seto, T., et al, "erlotinib alone or with bevacizumab as first-line therapy in patients with advanced non-squamous non-small-cell lung cancer harbouring EGFR mutations (JO25567); an open-label, randomised, multicenter, phase 2 study", The Lancet 2014, 15 (11) 1236-1244.

FALUCA – Third-line NSCLC Monotherapy
Presented at WCLC 2019

CHI-MED

FALUCA Phase III (enrolled Dec 2015 to Feb 2018)

- *Met all* secondary endpoints: mPFS; ORR; DCR; & DoR [1];
- Did not achieve primary endpoint of median OS, however:
  - ↗ Anti-tumor therapies after disease progression reduced OS diff.
  - ↗ Higher percentage of placebo pts received subsequent treatments.

Significant difference in subsequent anti-tumor treatments (ATT)

- **Chemotherapy:** Fruq. 29.7% vs. Placebo 53.8%
- **Targeted therapies (VEGFi and/or EGFRi):** Fruq. 20.9% vs. Placebo 31.2%
- **Tagrisso® & anlotinib just approved** in 2017

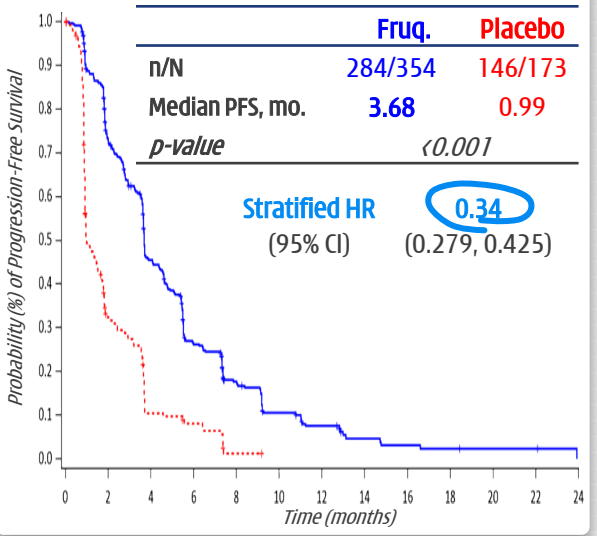
Efficacy Endpoints (Intent-to-Treat) [2]

	Fruq. (N=354)	Placebo (N=173)	*p-value*
mOS (mths)	**8.94**	10.38	*0.841*
mPFS (mths)	**3.68**	0.99	*<0.001*
ORR	**13.8%** (49)	0.6% (1)	*<0.001*
DCR	**66.7%** (236)	24.9% (43)	*<0.001*

Good safety; most Grade ≥3 TEAEs target-related & clinically manageable.

Patient (%)	Fruq. (N=354)	Pbo (N=173)
TEAE ≥ Grade 3	216 (61.2%)	47 (27.6%)
Leading to discontinuation	37 (10.5%)	9 (5.3%)
Leading to interruption	61 (17.3%)	7 (4.1%)
Leading to dose reduction	85 (24.1%)	2 (1.2%)
Hypertension	74 (21.0%)	5 (2.9%)
Hand-foot syndrome	39 (11.0%)	0

PFS in ITT population



OS in pts w/o subsequent ATT

HMPL-523 (Syk) & HMPL-689 (PI3Kδ)

Potential first-in-class (Syk) & best-in-class (PI3Kδ) assets

HMPL-523 (Syk) in hematological cancer

Phase I/Ib ongoing in Australia, China, US & EU

- Extensive **Ph.I dose escalation study now complete** in Australia & China (total n›60);
- RP2D [1] determined & **large Ph. Ib dose expansion study, total n›200**, underway in ~30 active sites in Australia & China;
- **U.S./E.U. Phase I/Ib enrollment underway**, with 13 sites enrolling;
- These Phase I/Ib data will **inform China registration study decisions in 2020**.

Australia & China Phase I/Ib studies

Stage I: dose escalation

- **Australia:** Relapsed/refractory hematologic malignancy
- **China:** Relapsed/refractory mature B lymphoma

"3 + 3" each dose cohort

N = 40

N = 27-42

Complete ✓

Studied HMPL-523

100-1,000mg QD & 200-400mg BID

until disease progression, death, intolerable toxicity, etc.

Stage II: dose expansion

…Now enrolling

Relapsed or refractory, measurable disease – multiple arms:

- Chronic lymphocytic leukemia (CLL)
- Small lymphocytic lymphoma (SLL)
- Mantle cell lymphoma (MCL)
- Follicular lymphoma (FL)
- Marginal zone lymphoma (MZL)
- DLBCL (in China) & WM/LPL

Aus N = 25

China N = 190

600mg QD

until disease progression, death, intolerable toxicity, etc.

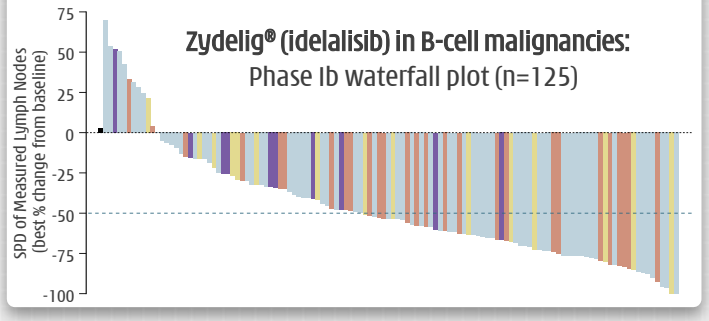
[1] RP2D = Recommended Phase II doses.

HMPL-689 – Phase I/Ib ongoing in China, US & EU

Designed to be a best-in-class inhibitor of PI3Kδ

1. PI3Kδ now a proven target.

- PI3Kδ activation associated with allergy, inflammation & oncology.
- Evidence that PI3Kδ inhibitors effective in ibrutinib-resistant mutant population.



2. PI3Kδ inhibitors being developed in a very broad range of indications.

Compound		Indication	Status	Issue
Zydelig® (idelalisib) PI3Kδ	Gilead	Chronic lymphocytic leukaemia, non-Hodgkin's lymphoma	Marketed	High incidence of liver toxicity seen with idelalisib (150mg bid)
AMG-319 PI3Kδ	Amgen	B-cell lymphoma, non-Hodgkin's lymphoma, T-cell lymphoma, chronic lymphocytic leukaemia	Phase I Trial	
Copiktra® (duvelisib) PI3Kγ/δ	Verastem/ Infinity [1]	Relapsed or refractory chronic lymphocytic leukaemia / small lymphocytic lymphoma	Approved	Need to spare PI3Kγ -- serious infection seen & associated with a boxed warning for 4 fatal and/or serious toxicities
		Relapsed or refractory follicular lymphoma	Approved [2]	
		Peripheral T-cell lymphoma	Phase II enrolling	
Aliqopa® (copanlisib) PI3Kα/δ	Bayer	Relapsed follicular B-cell non-Hodgkin lymphoma	Approved [2]	Serious and fatal infections and AEs

3. HMPL-689 -- Important asset.

Designed to improve on existing PI3Kδ inhibitors:

- **Improved isoform selectivity** (sparing PI3Kγ).
- **Improved potency at whole blood level** (›5x more potent than idelalisib) to cut compound related toxicity.
- **Improved PK properties** particularly efflux and drug/drug interaction due to CYP inhibition / induction, critical for combo therapy.

4. More potent / more selective than Zydelig®, Copiktra® & Aliqopa®.

Enzyme IC_{50} (nM)	HMPL-689	Zydelig®	Copiktra®	Aliqopa®
PI3Kδ	0.8 (n = 3)	2	1	0.7
PI3Kγ (fold vs. PI3Kδ)	114 (142X)	104 (52X)	2 (2X)	6.4 (9X)
PI3Kα (fold vs. PI3Kδ)	›1,000 (›1,250X)	866 (433X)	143 (143X)	0.5 (1X)
PI3Kδ human whole blood CD63+	3	14	15	n/a
PI3Kβ (fold vs. PI3Kδ)	87 (109X)	293 (147X)	8 (8X)	3.7 (5X)

[1] AbbVie ended collaboration with Infinity in June 2016 following Phase II results in indolent non-Hodgkin's lymphoma. Duvelisib now licensed to Verastem; [2] Accelerated approval was granted based on ORR, and continued approval may be contingent upon verification and description of clinical benefit in a confirmatory trials.

CHI-MED

A2e

HMPL-453 (FGFR)

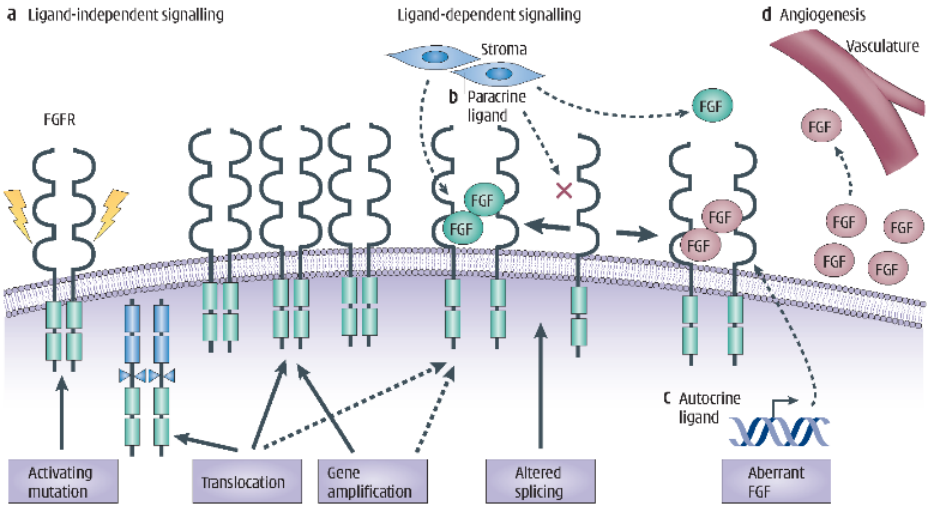
Aim to establish proof-of-concept

HMPL-453 – Phase II in China initiated

Designed as best-in-class FGFR1/2/3 inhibitor

1. FGFR genetic alterations are oncogenic drivers.

- FGF/FGFR signaling normally involved in embryonic development, tissue repair, angiogenesis, neuroendocrine and metabolism homeostasis.
- Multiple oncogenic driver genetic alterations in FGFR pathway: gene amplification, mutation, translocation, fusion, splicing, etc.



2. FGFR – diverse & complicated genetic changes with multiple tumor types harboring low incidence.

	Gene amplification	Gene translocation	Gene mutation
FGFR1	**Lung squamous** (7~15%) **H&N squamous** (10~17%) **Esophageal squamous** (9%) **Breast** (10~15%)	**Lung squamous** (n/a) **Glioblastoma** (n/a) **Myeloproliferative syndrome** (n/a) **Breast** (n/a)	**Gastric** (4%) **Pilocytic astrocytoma** (5~8%)
FGFR2	**Gastric** (5~10%) **Breast** (4%)	**Intra-hepatic biliary tract cancer (cholangiocarcinoma)** (14%) **Breast** (n/a)	**Endometrial** (12~14%) **Lung squamous** (5%)
FGFR3	**Bladder** (n/a) **Salivary adenoid cystic** (n/a)	**Bladder** (3~6%); **Lung squamous** (3%); **Glioblastoma** (3%) **Myeloma** (15~20%)	**Bladder** (60~80% NMIBC; 15~20 MIBC) **Cervical** (5%)

[1] Hutchison Whampoa Guangzhou Baiyunshan Chinese Medicine Company Limited (Chi-Med holds 50.0% through its 80.0% owned subsidiary Hutchison BYS (Guangzhou) Holding Limited), a JV with Guangzhou Baiyunshan Pharmaceutical Holdings Co. Limited which holds the other 50.0%.
[2] Mainly Hutchison Hain Organic Holdings Limited, a JV with The Hain Celestial Group, Inc.

China Commercial Platform has substantial value

- Chi-Med's Commercial Platform continues to perform well relative to our peer group.
- The market value, based on China Pharma median PE multiples is approximately $1.7 billion.[1]
- Given our share in the JVs, Chi-Med's share of this value is approximately $0.8 billion.
